Nepal flood toll hits 389; rescue work in top gear

Over 800 people rescued after the flash flood, 910 remain missing, say authorities

517 foreign nationals unaccounted for; PM Shah reaches nearest motorable town

Alert sounded along Bhotekoshi river as satellite images show blockage upstream

Probe on to determine the role of glacial lakes in the devastating flood, says Nepal

Sanjeev Satgainya
KATHMANDU

The death toll in the flash flood in Nepal's Rasuwa district bordering Tibet touched 389 on Thursday, with 910 people still missing. Nepal's government issued a fresh flood alert after satellite imagery showed that a lake had formed upstream of the Bhotekoshi river due to a blockage, and warned that it could burst.

Nepal's Foreign Minister Shishir Khanal termed the flood "one of the largest natural disasters we have experienced in recent memory" even as authorities continued a massive search-and-rescue operation. "Towns after towns were wiped out in a span of a couple of hours," he said.

Personnel from the Nepal Army, police, and the Armed Police Force raced against time to rescue survivors from mountain villages that were swept away by the flash flood on Wednesday morning.

According to authorities, more than 800 people were rescued from flood-affected areas as of Thursday night.

Of the 910 missing, 517 are foreign nationals with people from more than 30 countries remaining unaccounted for, they said.

Raising concerns about another possible flood, the government said "satellite imagery and preliminary analysis indicate that water has accumulated at the site where flooding was reported" on Wednesday. "The lake is continuing to rise, and authorities have warned that it could breach or burst, potentially sending a sudden surge of water downstream." It urged residents, travellers, rescue personnel, and others in the downstream areas to remain alert. "It is

advised that people stay away from riverbanks and other vulnerable areas... until further notice," it said.

Nepal's Prime Minister Balendra Shah reached Bidur, the district headquarters of Nuwakot, which abuts Rasuwa, by road. With 19 bridges and 40 ki-

Swept away: Sludge surrounds damaged buildings at Bidur in Nuwakot district of Nepal on Thursday, more than 24 hours after the deadly flood tore through the region. AFP

lometres of roads damaged, it is the last point up to which vehicles can reach.

It is still unclear what caused the flash flood. According to the Nepal government, satellite imagery indicated that an avalanche in the Himalayan region triggered a

surge of an unusually large volume of water. "Further investigations are under way to determine the role of possible glacial lakes and related events," it said.

At least 290 Indians missing, says Centre

Kallol Bhattacharjee
NEW DELHI

In a "preliminary assessment" of the situation following the flash flood in Nepal, the External Affairs Ministry on Thursday said at least 290 Indian nationals remain "uncontactable".

"Urgent efforts are under way to ascertain the status and well-being of all Indians in the flood-affected areas," said External Affairs Minister S. Jaishankar, adding that India is "working closely with the Nepalese side".

After sending an aircraft carrying relief materials to the disaster-hit neighbour on Wednesday, the Ministry on Thursday said that a

Gathering info on travellers: Delhi govt.; 25 return from Mansarovar

Press Trust of India
NEW DELHI

The Delhi government is currently gathering information about city residents who travelled to flash flood-affected areas in Nepal and beyond, officials said on Thursday.

A group of 25 individuals who visited Mansarovar before the natural disaster struck has returned, the officials said. They added that information is also being gathered about other residents from the national capital who went on personal trips to the affected regions.

Four Nagas killed in ambush amid Manipur peace efforts

The Hindu Bureau
GUWAHATI

Unidentified gunmen on Thursday morning ambushed and killed four Naga civilians between Makui Ashang and Thanamba Naga villages in Manipur's Kuki-dominated Kangpokpi district.

Officials said the gunmen opened fire on at least six persons who were travelling from Makui to Senapati, a Naga-majority district. The authorities suspect that some groups are trying to undermine the State government's peace-building measures.

The United Naga Council (UNC), an apex body of

Manipur's Naga communities, blamed Kuki extremist groups for the attack though no outfit has claimed responsibility. It condemned the "barbaric and calculated" attack on the Liangmai Naga civilians and called it a "direct challenge to peace, the Indo-Naga peace process, and to the very existence of Nagas in our ancestral lands".

'Senseless violence'
Manipur Chief Minister Yumnam Khemchand Singh and Home Minister Govindas Konhoujam condemned the "senseless violence" and said it "strikes at our collective efforts to restore peace and

normalcy".

The UNC also appealed to the Nagas to remain vigilant and stand united against "such external threats". The apex Naga body identified the deceased as Tadsongbou Ringkangmai, Mariakdibou Wijunamai, Anil Wijunamai, and Wisobou Charenamai. It said Gaikamang Ringkangmai was injured in the attack, while one Japou M.K. was missing.

UNC alleged that the Kuki National Front (KNF), KNF (Presidential) and Kuki Revolutionary Army were behind the attack.

Settle SC judge's concerns over Acting Chief Justice internally, say Rajasthan HC lawyers

The Hindu Bureau
JAIPUR

Lawyers' bodies at the Rajasthan High Court's principal seat in Jodhpur and the Bench in Jaipur on Thursday said the issues raised by a Supreme Court judge about the High Court's Acting Chief Justice should be resolved at an institutional forum in the judiciary. The lawyers' associations also emphasised the need for appointing a permanent Chief Justice.

The three Bar Associations in Jodhpur and Jaipur will shortly convene a formal meeting for deciding the course of action over the matter after Justice Sandeep Mehta wrote three letters seeking the transfer of the High Court's Acting Chief Justice, Sanjeev Prakash Sharma.

"Such issues should be

The lawyers' associations also emphasised the need for appointing a permanent Chief Justice in the Rajasthan High Court. FILE PHOTO

taken up at an appropriate forum as a public debate on them will only tarnish the image of the judiciary," Rajeev Sogarwal, president of the High Court Bar Association, Jaipur, said.

He added that a permanent Chief Justice should be appointed in the High Court "without delay".

Besides the High Court

Bar Association in Jaipur, the two recognised lawyers' bodies in Jodhpur are the High Court Advocates' Association and the High Court Lawyers' Association.

In his letters addressed to Chief Justice of India (CJI) Surya Kant this month, Justice Mehta sought the transfer of Jus-

tice Sharma while alleging "misuse of powers, favouritism, nepotism, and administrative lapses".

In the letters, the apex court judge also raised concerns over the handling of court cases and infrastructure decisions.

'Serious issues'
Ranjeet Joshi, president of the High Court Advocates' Association, Jodhpur, said the issues raised in Justice Mehta's letters were "serious". The representatives of the three lawyers' bodies were in touch and would shortly decide the next course of action, he said. The High Court Advocates' Association had earlier written to the CJI seeking a permanent Chief Justice in the State and raised concerns over the relationship between the Bar and the Bench.

166 fresh
H1N1 cases
in Delhi in
24 hours

The Hindu Bureau
NEW DELHI

Delhi reported 166 fresh H1N1 cases in the last 24 hours, an increase from the 138 cases recorded the previous day, taking the cumulative tally to 2,612, officials said on Thursday. Health Minister Pankaj Kumar Singh inspected Indira Gandhi Hospital at Dwarka in view of the rising number of H1N1 cases in the national capital and reviewed the preparedness of the hospital and the Health Department.

The total number of H1N1 cases in Delhi stood at 2,612, and cumulative Influenza-A cases around 3,300, as per an official statement. The Minister said he has been closely monitoring preparedness across hospitals.

Meanwhile, Delhi Aam Aadmi Party (AAP) president Saurabh Bharadwaj alleged that Delhi government-run Guru Teg Bahadur Hospital is in a state of utter neglect. “Patients are not receiving all prescribed medications. Essential tests and scans are also unavailable at the hospital,” he said. AAP MLAs Sanjeev Jha and Kuldeep Kumar visited the hospital to assess the situation.

IIT Delhi reconstitutes panel to probe student’s death as protests enter fourth day

Institute says it is committed to ensuring students’ well-being; collecting evidence on ‘insensitive’ remarks by Dean as well as ‘tone-deaf’ comments made by faculty on deaths by suicide: students

The Hindu Bureau
NEW DELHI

Justice Mukta Gupta, a retired judge of the Delhi High Court, will now head the inquiry panel set up to examine the circumstances leading to the death of an IIT Delhi student, officials said on Thursday, even as student protests continued on campus for a fourth day.

The panel was reconstituted a day after former Uttarakhand Director General of Police Ashok Kumar, who was appointed as chair of the probe panel, recused himself from the committee. Students had objected to his inclusion, citing his purported comments on recent youth-led agitations, linking the protesters with “radicalisation”.

“A new panel has been constituted, with Justice Mukta Gupta as the chairperson. The other members include Pratap Sharan, HoD Psychiatry, AIIMS Delhi. Two student representatives and the IIT Delhi Registrar will also be part of the external probe panel,” an

Students staging a demonstration at IIT Delhi on Thursday night. They said they will continue their stir as the administration has not fulfilled all their demands. SPECIAL ARRANGEMENT

IIT Delhi official said.

The death of the 31-year-old MSc student, allegedly by suicide on the campus on August 22, has sparked massive uproar among several student bodies. Students at the institute have been protesting since Monday against “systemic issues”, which they claim have led to the deaths of eight students by suicide over the past 30 months, two of them this year alone.

On Thursday, students reiterated their demands that include ₹1 crore as compensation to be paid to

the mother of the deceased and the resignation of the Associate Dean of Student Welfare. The protesters said they were in the process of collecting evidence from other students, both former and present, on alleged “insensitive” remarks made by the institute’s Dean to students on multiple occasions as well as collating evidence from student on faculty and staff members allegedly making “tone-deaf and disparaging” comments on death by suicides.

In response to the demands of the students, the

IIT Delhi administration, in a statement, said it is committed to ensuring students’ well-being and enhancing its support infrastructure with multiple steps already being implemented.

‘For student well-being’

Listing some of the measures, the institute said when it comes to mental healthcare infrastructure for student well-being, it has counsellors available 24/7, psychiatrists (including AIIMS/VIMHANS experts); fully reimbursed external care, emergency response protocol, Academic Unit Wellness Committees and a buddy programme. The institute said it also has grievance redressal channels, including a Board for Student Welfare, specialised SC/ST/OBC cells, hostel wardens, the Internal Complaints Committee, and confidential counselling channels s - ensuring transparent resolution.

Bulldozers roll into Delhi Race Club; stables razed

Lavpreet Kaur
NEW DELHI

Demolition work began at the century-old Delhi Race Club in Lutyens’ Delhi on Thursday, shortly after the Centre took possession of the 53.24-acre premises and halted racing activities, officials said.

The Land and Development Office (L&DO) took over the property following a Patiala House Court order on Tuesday dismissing the club’s plea seeking an interim stay on the August II eviction order passed by an Estate Officer under the Public Premises (Eviction of Unauthorised Occupants) Act, 1971.

Bulldozers demolished several structures, including the stables, bookmakers’ ring, winning post, photo-finish camera, and saddling enclosure, a club official said. The club had more than 250 horses, of which around 200 have been taken back by their owners, while about 50 remain on the premises. The club has been given time until September 14 to complete the process of moving the remaining horses, according to officials.

The L&DO sought assistance from the New Delhi police for deployment during the demolition. No untoward incident was

Debris lying scattered as the Centre took possession of the 53.24-acre premises in the Race Course area on Thursday. Several structures were demolished, including the stables, bookmakers’ ring, winning post, photo-finish camera, and saddling enclosure. PTI

reported.

The dispute over the property began in March when the L&DO issued a notice directing the club to vacate the government land within 15 days, stating that it was required for public purposes. The club challenged the notice before a single-judge Bench of the Delhi High Court, which had directed the authorities not to proceed further with the matter until July 30.

However, the Centre had appealed the single-judge Bench order before a Division Bench of the High Court. The Division Bench of the High Court set aside an interim order that stayed the show-cause proceedings against the club, allowing the eviction process to continue.

On August 11, the Estate Officer directed the club to

vacate the premises within 15 days, holding that its lease had expired on December 31, 1994, and had not been renewed.

The Centre has maintained that the lease executed in 1926 was temporary and that the club had remained in unauthorised occupation since January 1, 1995. The club’s main appeal against the eviction order is scheduled for final disposal before the court on September 26.

Teen flaunts firearm on social media; apprehended

The Hindu Bureau
NEW DELHI

The police have apprehended a 17-year-old youth from north-east Delhi’s

Welcome area for allegedly displaying an illegal firearm in a video posted on social media, officials said on Thursday, adding that the weapon has been seized.

Following information about the video circulating widely on Instagram, a police team conducted a raid and apprehended the teenager on Wednesday. The

police have recovered a country-made pistol from his possession during a search. A case has been registered and further probe is going on, officials added.

Goal is to ensure no woman goes unheard: DCW chief

Shrimansi Kaushik
NEW DELHI

Lata Gupta, newly appointed chairperson of Delhi Commission of Women (DCW), on Thursday said her sole objective is to ensure that no woman goes unheard in the national capital. In an interview with *The Hindu*, Ms. Gupta said every woman must feel supported and cared for. “This is what the commission was formed for and I will ensure it remains accessible to the women of Delhi. Women must not feel they are alone in this city,” she said.

“There are so many women who are not aware of their rights, who don’t know the legal process to follow in case of harassment, either at the workplace, at home or at public places. Our focus is to expand awareness and take it to colonies through RWAs,

DCW chairperson Lata Gupta in her office. SUSHIL KUMAR VERMA

at offices, schools and colleges,” the DCW chief said.

Ms. Gupta was appointed at the end of July this year. The post remained vacant for two years after former chairperson Swati Maliwal resigned in 2024, following her nomination to the Rajya Sabha by the then-ruling Aam Aadmi Party.

A former two-time municipal councillor from Laxmi Nagar in the East Delhi Municipal Corporation, Ms. Gupta has also worked with the Bharatiya Janata Party (BJP) Mahila Morcha and

served as the vice-president of Delhi BJP. Ms. Gupta said she wants the DCW to create greater awareness so that not a single complaint goes unheard. “I don’t compare my work with anyone. We are focusing on digitisation of complaints, thorough follow-ups and time-bound action,” she said.

Besides running women’s helpline and overseeing the Sakhi One-Stop centres, the DCW will focus strongly on Prevention of Sexual Harassment at workplaces Act (POSH) and cyber fraud, she added.

Lawyer, father held after wife dies by suicide

The Hindu Bureau
NEW DELHI

A lawyer and his father were arrested on charges of dowry harassment following the death of his 29-year-old wife, the police said on Thursday.

The woman died allegedly by suicide in her south-west Delhi residence on Wednesday. The police said her husband, Harshal Varma, was not present at the site at the time of incident. His father Dinesh Kumar Varma runs a jewellery shop at R.K. Puram in Delhi. The woman’s father told mediapersons that she had been facing dowry demands since her marriage in February. “Prima facie, there no visible injury marks were found on the body. Post mortem report is awaited,” an officer said.

(Those in distress can contact Tele MANAS at 14416 to seek help.)

GIPMER expands neurovascular health care

The Delhi Bureau
NEW DELHI

The Neuro Cath Lab at Govind Ballabh Pant Institute of Postgraduate Medical Education & Research (GIPMER) has completed six months of service, expanding access to advanced neurovascular care for patients. Inaugurated by Delhi Chief Minister Rekha Gupta and Health Minister Pankaj Kumar Singh in February, the lab provides diagnostic cerebral and spinal digital subtraction angiography, endovascular coiling of intracranial aneurysms, and arteriovenous malformation embolisation.

Anita Jagetia, Director Professor and Head of Department of Neurosurgery, GIPMER, said the facility had enhanced the institute’s ability to manage complex cases.

Over 1,000 IGDTUW students land plum placement offers

The Hindu Bureau
NEW DELHI

The Indira Gandhi Delhi Technical University for Women (IGDTUW) successfully developed and handed over 75 surveillance drones to Delhi Police under the ‘Netra-Naari-Netritva’ initiative, and over 1,000 students secured placement offers, with the highest package of ₹1 crore, as per the Chief Minister’s Office (CMO).

Lieutenant-Governor Taranjit Singh Sandhu and Chief Minister Rekha Gupta on Thursday attended the valedictory ceremony of the ‘Prabodhan’ Induction Programme-2026 at the IGDTUW. They also inaugurated the university’s lecture hall complex equipped with modern facilities. “During the recent placement season, IGD-

Delhi L-G Taranjit Singh Sandhu with CM Rekha Gupta at the Indira Gandhi Delhi Technical University for Women on Thursday. ANI

TUW students received more than 1,000 placement offers, with the highest package recorded at ₹1 crore. These achievements reflect the growing confidence of Delhi’s daughters,” the CMO said in a statement.

131 kg of expired food articles destroyed

The Hindu Bureau
NEW DELHI

Delhi’s Food Safety Department identified and destroyed over 131 kg of expired food articles, including *besan* (gram flour), *khoya* (soft cheese), and *atta* (whole wheat), during an inspection, officials said on Thursday.

Ahead of Raksha Bandhan and Janmashtami, surprise inspections were conducted on Wednesday at sweet manufacturing units in Okhla, Badli, Nihal Vihar, and Narela, as well as at mandis, including Okhla Subzi Mandi and Ghan-ta Ghar Subzi Mandi.

The drive comes ahead of Raksha Bandhan and Janmashtami festivals.

The teams also collected 37 samples of paneer, ghee, sweets and other food products.

A large crowd of people is gathered in front of a building. A sign on the building reads "KARAKA & SONS" and "KARAKA COMPUTERS LTD." Below the sign, there is a banner with the text "ဂါးလီလီ" and "ပျဉ်းမာန်". The crowd is dense, and many people are looking towards the building. The scene appears to be a public gathering or protest.

The Kerala State Beverages Corporation (Bevco) clocked liquor sales of ₹771.29 crore during the eight days leading up to Onam till August 25. The corresponding figure during the previous year was ₹694.9 crore, its Managing Director told *The Hindu*. The highest daily sales of ₹132.87 crore during the period was recorded on August 24, while the sales on August 25 was ₹126.34 crore. The sales figures for Uthradom were lower compared to the previous year's ₹137.64 crore.

Seven people were killed, and eight sustained injuries when a private bus rammed an autorickshaw at Addaroad Centre in Chilakaluripet town of Palnadu district, Andhra Pradesh, on Thursday. Fifteen people, all from Veluru village in Chilakaluripet mandal, had travelled in the autorickshaw to Konda Manjularu village in J. Panguluru mandal of Prakasam district, the police said. While returning to Veluru, the autorickshaw was taking a turn at Addaroad Centre when it was hit by a private travel bus travelling from Vijayawada to Tirupati.

Eight Forest officials from Keralam, including an IFS couple, will face trial for custodial torture, a decade after the alleged incident. Last week, the Chief Judicial Magistrate Court, Thiruvananthapuram, ordered the prosecution of IFS officers T. Uma; her husband, R. Kamalahar; and K. Vijayanandan, and forest officials T.S. Mathew Jyothish, T. Sreejith, R.B. Arunkumar and K.S. Anu Krishnan on a complaint from Aji Brait, an accused in the Malayattoor elephant poaching case in 2015.

After hearing the parties, Justice Bhattacharyya said in view of his July 9 order appointing a special officer to clear and meet the day-to-day expenses of the political entity from three other debit-frozen accounts, no further order was required at this stage regarding the four accounts.

Students at the Manjari ST Hostel in Maharashtra have been protesting in the corridors of the boys' section, with the women commuting about 4 km daily to the protest site. VINAYA DESHPANDE PANDIT

Gen Z Adivasis ask for more

In Manjari village, on the outskirts of Pune, tribal students have been protesting for over two weeks with a hunger strike against the Maharashtra government, which they say has not heard them for years. Among 14 demands is their need for better hostel infrastructure and Supreme-Court-mandated employment assured nine years ago. **Vinaya Deshpande Pandit** speaks with the students, many of whom are first-generation college-goers

Students have been protesting for 16 days at the Manjari ST Hostel on the outskirts of Pune city, seeking safety, health, and better educational quality and infrastructure. VINAYA DESHPANDE PANDIT

As the media cameras hover over a youth group of 70-80 students, men on the left and women on the right, they lash out at the booms: “The government should feel ashamed! Its young generation has been suffering silently, raising demands in a democratic manner. And what are they doing? Ignoring our voices. The Adivasi will not be silent now. We are the children of Birsa Munda,” says a youth, his fists clasped. “There will be consequences if anything happens to our brothers and sisters who have been on a hunger strike,” says another young woman.

A group of medical staff intervene as they check the vital parameters of the students lying down at the Manjari ST (Scheduled Tribes) Hostel on the outskirts of Pune, Maharashtra. Sleeping on cotton mattresses, covered in dusty blankets, these students on a hunger strike, gather all the energy when questions are posed to them.

A group of students sits around their heads, whispering in their ears about the delegation which has left to speak with the government. The blue table fans are tilted horizontally, to give relief to the students lying down, weak from not eating for 14 days.

Other protesters are busy checking their social media feed. Some live stream the protest on their personal social media handles. A public announcement system is in use almost all the time, motivating the students to fight for their rights.

At the hostel are posters of Dalit icon Dr. B.R. Ambedkar, the 19th-century educator-social reformer Savitribai Phule, and the 19th-century social reformer Chhatrapati Shahu Maharaj. One is of Birsa Munda, the tribal leader the young woman referred to, who fought for indigenous rights. The government celebrated his 150th birth anniversary in 2025 with much ado.

Tribal students have been protesting from August 12-13 in at least 25 parts of Maharashtra, to draw the government's attention to their long-pending demands. These include the filling up of 12,500 government-job positions for tribals, as directed by the Supreme Court in 2017; better living conditions, kitchens, and reading rooms in hostels; improved and expanded educational facilities and infrastructure.

The government has held four rounds of talks with the protesters in Manjari. The students have a list of 14 demands. First, the government accepted one, suspending the clause of age limit for admission to the tribal government hostels.

On August 28, as the protest entered its 16th day and political mobilisation grew, Maharashtra's Tribal Affairs Minister, Ashok Uike, told students that the government has accepted all their demands. The students say they will withdraw the agitation once they receive the written draft of the government's assurances.

Hunger caused a strike

Hung from the ceiling in the corridor where the protest is taking place, are effigies of tamasha

We have sat for these protests for the last four years, ever since I entered the hostel. Why do we have to protest every year to make ourselves heard, to get basic concerns like safety and hygiene addressed?

GAURI PARDHI
A student in the Manjari ST Hostel

performers, legs dangling overhead. Tamasha is a local folk dance, and is also a word used pejoratively in Marathi to refer to drama. The protesters, most in their 20s, have put them up satirising what a senior administrative officer said. “Stop your tamasha,” he told us. So we hung these here, to tell him that we won't,” says a woman.

The narrow lane leading to the three buildings of the government-run tribal boys' hostel on the outskirts of Pune has been unusually abuzz with activity since Congress leader Rahul Gandhi's Pune visit. In his 'Chhatron ki Goonj' (Resonating Sounds of Students) rally held on August 22, he gave the protesting students a platform to speak, thereafter writing a letter to Chief Minister Devendra Fadnavis, asking him to address the concerns of the students. It was after this that the age cut-off in hostels was removed.

Women come to the protest site daily, commuting about 4 km from the girls' hostel. Sometimes there may not be electricity or water; sometimes the bus is delayed.

Bustle in the lanes

Outside the narrow lane of the hostel, police *bando* (arrangement) has increased. So has the footfall. Several political parties and social organisations have visited to express their support. When political parties' delegations give lofty promises of support, the girls quickly seek their names and contact details.

The residents of the buildings around the hostel in the residential area are piqued by the rise in social interest. Standing around the muddy ditches in the lane, they whisper to each other about the flow of visitors.

As a doctor from the nearby Loni Kalbhor Public Health Centre checks the blood sugar and

blood pressure levels of the agitating students, 26-year-old Shweta Irnak shrieks, her body convulsing. The doctor is unable to draw blood from her fingertips for a routine blood sugar level test. “They have pricked all my fingers. I can't take it anymore,” she says, as the doctor announces that she needs to be moved to the hospital immediately.

“Their condition is critical. Shweta needs immediate medical attention. We have already evacuated Nikita Mechikar to the health centre,” says Dr. Manoj Thawre. Of the six tribal students on a hunger strike in Manjari, Shweta is the second and the only girl at the protest site now. Nikita is under medical supervision at the Loni Kalbhor Primary Health Centre after she refused to go to a larger medical facility, Sassoon Hospital, about 15 kilometres away.

The medical team says that the blood pressure of all the protesting students has dropped; so has their blood sugar level. “But we are giving them only symptomatic treatment as they have refused to take any medicines. We administer IV fluids, but they come back to the protest site,” he says. A nurse on rotation duty writes down the vital parameters of all the students on a chart.

For Nikita Mechikar, Shweta Irnak, Sharad Thokal, Rajaram Padvi, Vijay Bamble, and Rahul Dhanve, their hunger strike is a mission to force the government to hear their voices. These tribal youth from different parts of Maharashtra are united by their resolve not to give up.

First-generation learners

The immediate trigger for the protest this year was the government order issued on August 5, which capped the age limit for stay in the tribal hostels at 26 years. Several students say the hostel gives them the place to study for competitive exams and apply for jobs in the city, so that they can eventually stand on their own feet.

Tribal organisations and students' unions gave a memorandum to the government, seeking that the age limit be scrapped. After protests started in different parts of Maharashtra, the government issued a fresh order on August 14.

In this order, they increased the age limit to 30 years. By this time, the protests had already begun, and were fuelled by the death of three tribal girls from snake bite at a private aided tribal ashram school in Gadchiroli. The protesters demanded that the families of these girls receive compensation of ₹1 crore. They also asked for health insurance.

“There is so much competition in education, in jobs. Several of us are the first generation in our families to go for higher education. We don't have any resources to stay in big cities, to find jobs,” says 21-year-old Gauri Pardhi from Junnar, a taluka in Pune district. Sitting at the protest site, she talks about how her younger brother is also a part of a similar protest in Ghodegaon, about 75 km away.

The government scrapped the age limit, but

Vijay Waghmare, Secretary, Tribal Development Department, says the original intent of putting an age cap for stay in hostels, was to give younger tribal girls the opportunity to come and study in large cities.

“The younger tribal students need more sheltering and a sense of community belonging when they leave their house at the age of 18. The older tribal students will continue to be supported through the Swayam Scholarship scheme until they turn 30,” he says. This is specifically for those who do not get hostel accommodation.

The students say that the state needs to build capacity to absorb more tribals in hostels. “For several years, the government has not increased the number of tribal hostels or the number of students who can be accommodated in them. Give us opportunities to study. Build more hostels,” says Navnath More, a protester.

Many complain that ST hostels are often at the edges of cities, making commute time to colleges long and difficult. They want hostels within cities.

According to the state government, 59,020 students stay in 490 tribal hostels in Maharashtra.

A reiteration of needs

Among the list of demands the tribal students have made, is the withdrawal of Government Resolutions that restrict student assembly, protests, and union participation. They have also sought an immediate halt to invasive and compulsory medical practices, such as pregnancy tests in female tribal hostels, and have demanded better security for students.

“Most of these demands have been made each year. We have sat for these protests for the last four years, ever since I entered the hostel. Why do we have to protest every year to make ourselves heard, to get basic concerns like safety and hygiene addressed?” asks Pardhi.

Students also want the central kitchens which supply food shut, so fresh food is cooked at each tribal school location. “The tribal ashram schools are located far apart. Often, the food is cooked several hours before, and transported up to 100 km. There are times it goes bad. The children stay hungry,” says Suchitra Pagl, also on protest.

Government officials say central kitchens are easier to monitor. “Quality control becomes easier. Local level complaints of bad food are avoided. This is a tried and tested model,” an official of the Tribal Department says. For the tribal students studying in colleges, the protesters want the government to halt the Direct Benefit Transfer money and provide messes in each hostel instead.

On the filling of job vacancies, a government official says, “It is not something that can be done overnight. Our talks are on. We will find a way to handle this, but many departments are involved.” Minister Uike told the protesters that he would discuss the issue with the Chief Minister and find a resolution.

Crafting art (Clockwise from left) Artur Zurawski with Rani Mukherjee; Aditi Rao Hydari; filmmaker Kaizad Gustad; and Artur Zurawski. SUSHIL KUMAR VERMA AND ARTUR ZURAWSKI

All roads lead South

South Indian music, food, cinema, and art come together at the South Side Story

Sangita Rajan

sangitarajan.pb@thehindu.co.in

Delhi has always been a city of arrivals. People come here from across the country, bringing with them their languages, food, music, memories and ways of making a home.

It is this spirit of cultural cross-pollination that Red FM's South Side Story has tapped into for the past seven years. What began as a music festival celebrating South Indian artistes has steadily grown into a broader cultural gathering, bringing the food, literature, cinema, dance and traditions of the South to audiences in the North. Now in its eighth edition, the festival returns to Delhi on August 29 and 30, with an eclectic line-up that moves from Thakkudam Bridge and Karthik to dancer Shobana, Raghu Dixit, Avial, Baby Jean and Aksomaniac.

"We realised that it can't just be a music festival. It needs to be an experiential festival where people come and experience the culture, food, art, literature and cinema. That's why we have brought in kalaripayattu, chendamelam, the Onam sadya, literary conversations, cinema, art and craft. We want people to come and spend the entire day here," says Nisha Narayanan, director and COO, Red FM.

The desire for variety extends to the way the music is programmed. Rather than splitting the festival across multiple stages by genre, South Side Story brings artistes from disparate musical worlds together on one stage – from folk and experimental music to pop, rap and classical forms. There is also Spotlight, an initiative that gives emerging

Cultural exchange (Above) Raghu Dixit; (below) the audience at the previous edition of South Side Story. SPECIAL ARRANGEMENT

talent a chance to perform after being shortlisted by the South Side Story jury. "We invite artists who may not have had the opportunity to perform on a platform of this scale. It is important for us to create a space for newer voices and give audiences a chance to discover them," says Nisha.

And perhaps that is why the festival's audience extends beyond the South Indian community. According to Nisha, around 30-35% of its Delhi audience comprises people from the North who come to experience the music, food and culture of the South. In a city where almost everyone has arrived from somewhere else, perhaps the appeal is less about discovering an unfamiliar culture and more about recognising how easily one culture can make room for another.

South Side Story will be hosted at KD Jadhav Indoor Stadium on August 29 and 30. For tickets log on to southsidestory.in

anuj.kumar@thehindu.co.in

Of late, Indian filmmakers are looking for an outside eye to realise their creative vision. They are turning to European directors of photography to give their celluloid dreams a shade of everyday reality. One of the most significant names of this surge is Artur Zurawski, whose lens work has redefined the visual language of commercial Hindi cinema. After capturing a monsoon-soaked Goa in Kaizad Gustad's *Jackpot*, the Polish cinematographer pivoted to raw realism when he injected a documentary-style grit into the Bollywood thriller *Mardaani*. Then he grounded Salman Khan's *Sultan*, a sports spectacle in Haryanvi texture, and this year he reunited with Rani Mukerji to frame the third installment of *Mardaani*.

In Delhi for his solo exhibition of still photographs with the Polish Institute, Artur says his role is to bring larger-than-life stories closer to life without making the experience too exotic for the audience. Initially shocked by the colours in frames, Artur says he is trying to balance art and culture. In European cinema, he says, actors have minimal hand gestures. "Here it is a little too much for me. I would advise the directors to limit it, but then it is culture." As for the emotions, Artur says they are not too different from what he experiences back home. "People of both countries have learnt to live with generational trauma. You faced the Partition, we were not on the map of the world for more than a century," he says.

Discovering India

What worked with Artur was that he didn't come to India with an image in mind. He was introduced to Satyajit Ray's cinema after working in India. Someone gifted him a DVD of Sanjay Leela Bhansali's *Black*, but he did not know Rani was conscious of her camera profile or that no one can say 'no' to Salman. "For me, they were performers without the baggage of stardom. Rani trusted me completely. Salman comes to the set for a limited period of time, but he is open to suggestions. I knew I had to get the best out of his charismatic face. For the rest, there are body doubles!"

Polishing dreams

In Delhi for his solo exhibition, Artur Zurawski, the noted Polish cinematographer, talks about his craft and working with Indian stars

This intimacy is reflected in the 40 photographs on show at the exhibition, meaningfully titled *I See You*, where the moving images of Rani Mukerji and Aditi Rao Hydari go beyond the characters that exist on screen. "These are not behind-the-scenes photographs. The idea is to preserve traces of encounters and relationships that remain invisible once the film is complete," he muses.

As a cinematographer, Artur, who still cherishes his conversations with Pradeep Sarkar, says his job is not just to suggest to the director what angle will work, but also to stop him from spending time and money on unnecessary shooting. "I don't always succeed because sometimes the director is not clear in his head and shoots everything in wide angle as well as close-up and

leaves the decision for post-production. When the director scratches his head, I sweat," Artur grins. Pushing for discretion in the use of technology, he says, as small drones have become accessible and affordable, the surprise factor in aerial shots has almost gone. "In *Mardaani*, I shot action sequences with one camera, but in *Sultan* I deployed seven. Yash Raj (Films) ordered an anamorphic lens from Germany for me to help elevate the wrestling sequences and add emotional depth."

Against the use of artificial intelligence in cinema, Artur, who took a workshop at AJK Mass Communication Research Centre in Jamia, says making movies through generative AI would be a catastrophe for creativity. "It can be used for creating a particular moment, like the way special effects are used, but these days it seems producers are eager to create entire movies through AI. It will still require a DOP because only he knows how to frame a shot to get the emotions. The danger is if the new generation of DOPs grow up with AI, they might not be able to differentiate."

Reflecting on the trends in cinematography, Artur shares that these days old lens are being tuned to create an unpretentious effect. "Lens that have issues with focus or edges are being used to create an impactful image. It could well be for one scene. Filmmakers want to recreate the effect of an iconic film, so we research to find the lens used, then when it could not be created through special effects."

After commercial success in India, Artur is now working on an art-house Nepalese film with director Bikash Subedi. Called *Shirjara*, Artur says, it is about the transformation of a young London-based AI engineer who travels to Nepal with her grandmother to code empathy. "The story is simple, but it requires technology to shoot at night or at dawn with natural light. I convinced Bikash to take the equipment from India, and do the post-production in Poland."

This cross-pollination of ideas is something that Artur cherishes. "I can say the food on Indian film sets is much better than what we get back home."

The exhibition runs until August 29 at Anant Art Gallery, Safdarganj Enclave.

Don't be a drag

With Kitty Su Beauty, three matte liquid lipsticks, two glosses, and a philosophy borrowed from drag come together

brands are supposed to have one. We wanted to make it because Kitty Su already had a beauty language of its own," says Keshav Suri, executive director, The LaLiT Suri Hospitality Group. For Keshav, that language begins with a simple distinction.

"Enhancement assumes there is something about you that needs fixing. Expression begins from a completely different place: there is nothing wrong with you."

Lip service (Left) The Kitty Su Beauty collection; (inset) Keshav Suri with Rakhi Sawant at the launch in Delhi. SPECIAL ARRANGEMENT

That thinking also explains why the brand comes from queer nightlife and drag rather than the familiar celebrity-beauty playbook. "Queer nightlife has been experimenting with identity, beauty and transformation long before the beauty industry decided to call it innovation," Keshav says. "We didn't want to borrow that culture as an aesthetic. We wanted to build from the people and the spaces that actually created it."

Hash Brownie, the Delhi-based drag queen, performer and makeup

artist who worked on the collection, puts it more simply: "Drag taught me that makeup is a language." It is not necessarily about making someone prettier. It can create a character, alter proportions, communicate a mood or deliberately contradict what people expect to see. Drag performers, she points out, also have to make products work, often improvising, layering and ignoring the instructions entirely.

That irreverence shaped the collection's colour story. Hash wanted the shades to have a strong identity without becoming restrictive. "A product should give you a starting point, not a set of rules." The three lipstick shades – Hotline, Tantric and Blackmail – are designed to be more versatile than their names suggest. Hotline can be an unapologetic red lip, a blush or a face pigment; Tantric brings earthy depth and warmth; while Blackmail can go graphic and editorial. The same three shades, Hash says, should be able to look completely different on three different people.

Wear with pride

Cyril Feuillebois, founder, Kitty Su Beauty, which has been in the works for

around three years, approached the formulas with a similar idea: performance should not mean punishment. "Performance should come from the product, not from having to fight with it," he says. The brief was to create colour with presence and staying power without making it heavy or uncomfortable, particularly for makeup designed to withstand movement, heat, lights and long nights.

For Hash, the larger idea extends well beyond drag. "You don't need a stage, a wig or a drag name to experiment with who you want to be." Makeup can be subtle one day and excessive the next; it can reveal something or invent an entirely new version of you. "Sometimes, the most empowering thing makeup can give you is simply the freedom to decide what you want to look like."

After 15 years of building a nightlife institution around freedom, performance and self-expression, Kitty Su is now taking the same philosophy into beauty. Really, it was already wearing the lipstick. It has just finally put it in a tube.

Kitty Su Beauty will be available at kittysubeaity.com and Amazon.

Editorial

Danger from above

Natural outbursts in hilly terrain are rising amid climate change

Disaster struck Nepal on Wednesday after a flash flood ravaged the Himalayas and foothills. As of Thursday, at least 359 people including several foreign tourists, had died, while at least 300 Indians remained missing. Satellite imagery analysed by global agencies, including the Indian Space Research Organisation, points to a glacier collapse or ice-rock avalanche in Tibet, possibly followed by a temporary river blockage and its sudden failure. An earthquake was initially suspected, but evidence has not borne it out. While the immediate flood wave has passed, there are warnings of possible secondary flooding from debris blockages upstream. There has been extensive damage along the Bhothe Koshi and Trishuli corridors, with settlements washed away and hydropower and monitoring infrastructure damaged. Nepalese authorities said 35 motorable and 45 suspension bridges and about 40 kilometres of roads had been damaged.

Given that it is the monsoon, north India and the larger Himalayan regions are under the influence of a powerful Western Disturbance. It would thus not have been unreasonable to attribute the floods to these extratropical storms that can cause clouds to collide with mountains and release enormous quantities of rain at short notice. But the ubiquity of satellites is helping establish a more complex picture, pointing to collapsing glaciers and recalling the October 2023 South Lhonak Lake disaster in Sikkim. There, an eponymous Himalayan glacier suddenly gave way, releasing millions of tonnes of water, debris and rock that pulverised Sikkim's largest hydropower project. Subsequent analysis showed that the resulting Glacial Lake Outburst Flood (GLOF) had been years in the making. The Indian Himalayas have nearly 7,500 glacial lakes and about 15,000 glaciers, some monitored through remote sensing. Yet, fully assessing their condition requires site visits, difficult because these lakes lie in inhospitable terrain while expeditions are generally feasible only from July to September. Even with satellite monitoring, accurately forecasting a glacier collapse remains exceedingly difficult – and can be counterproductive if warnings trigger panic among residents who, often because of habit or lack of alternatives, are unlikely to move out of harm's way. Dams and hydropower projects in such terrain are often among the first casualties of these natural outbursts, which are increasing amid global warming. Beyond relief and rescue, governments must enforce construction codes, discourage settlements and large projects in known vulnerable zones, and invest in better tracking of glacier health. Such monitoring can feed long-term disaster planning into development programmes. A tragedy is frequently not the result of a conspiracy but the product of passive neglect; the latter can be addressed.

New-age fires

Fire accidents in ICUs need better and more evacuation facilities

Not too long ago, India's fire accidents typically occurred in industrial facilities, large offices, mass gatherings, firecracker units and railway compartments, caused by faulty machinery, weak safety procedures and careless use of flammable materials. While these risks persist, what has got added to the country's poor record in fire safety in the last 15 years or so is residential buildings, hotels and hospitals, especially Intensive Care Units (ICU). Electrical fires now seem predominant, often caused by increased appliance use, overloaded electrical systems and poor maintenance. ICUs are especially vulnerable with their oxygen-rich environments. This month, back-to-back accidents at neonatal ICUs in Amravati, Maharashtra, and Chhindwara, Madhya Pradesh, claimed the most vulnerable: newborn babies. The Amravati fire was put out in 30 minutes, but the smoke was too much for the three babies admitted because of complications. A faulty ventilator is suspected to be the cause. In the NICU at Chhindwara District Hospital, a short circuit in a warmer triggered a fire and three babies, just days old, suffered burns. Over the past 15 years, ICU fires, including the one in Jhansi in 2024, in which 18 newborns died, have not served as a wake-up call. The Amravati fire shared many features with previous incidents.

Perhaps the best way to respond to these new-age fires would be to treat ICU accidents as a distinct category. ICUs are sealed compartments where smoke fills up very quickly. In an NICU, where patients cannot self-evacuate, evacuation drills are essential. A best-case setup would have three independent exits, with at least two allowing horizontal evacuation, automatic sprinklers, independent power lines for large equipment, oxygen cylinder bed supports, and fire drills every two years. A well-designed ICU also locates oxygen outlets away from sockets. Following a Delhi NICU fire, the National Neonatology Forum called for mandatory fire safety certification for NICU-equipped hospitals, regular power audits, analogue addressable alarms, and an evacuation protocol – now RACE or Rescue, Alarm, Confine, Extinguish/Evacuate. The 2026 National Guidelines on Fire and Life Safety in Healthcare Facilities can be a useful starting point for ICU-NICU safety. Beyond all this lies an issue in power quality: electrical harmonics. NICU equipment is packed with electronic components that draw distorted current, which can silently overheat neutral wiring, transformers, and loose connections without tripping a breaker. Post-fire reports citing generic “short circuits” or “technical faults” may well be missing this harmonic-driven degradation, a largely unaudited risk factor.

Days after both Houses of Parliament were adjourned *sine die* on August 13, 2026, the monsoon session has yet to be formally prorogued. The delay has prompted speculation that Parliament could be reconvened for another attempt at the constitutional amendment linked to delimitation and women's reservation. Whether or not that happens, it gives urgency to a question Parliament must confront: must delimitation necessarily mean an enlargement of the Lok Sabha?

Numbers alone cannot decide

At first glance, the issue looks like arithmetic. India's population has grown enormously since Lok Sabha seats were frozen half a century ago, so it seems natural to argue that representation must now expand correspondingly. But, constitutional design is not arithmetic alone.

Article 81 requires representation broadly to correspond to population, “so far as practicable”, while Article 82 provides for readjustment after every Census. Yet, Parliament has twice modified the mechanical application of this principle when another compelling national objective was at stake. In 1976, through the 42nd Constitutional Amendment, the inter-State allocation of seats was frozen on the basis of the 1971 Census so that States successful in family planning were not politically penalised for reducing population growth. The freeze was later extended by the 84th Amendment until the publication of figures from the first Census conducted after 2026. Parliament thus recognised that population matters, but it is not the only constitutional value at stake.

The government has reportedly suggested increasing every State's representation by roughly 50%, arguing that this would leave each with the same ‘proportion’ of Lok Sabha seats that it has today. On the face of it, that appears to answer the fear of the southern States of losing their relative position. But ‘proportion’ tells only half the story.

Suppose Uttar Pradesh rises from 80 seats to 120, while Tamil Nadu rises from 39 to about 59. Their proportional relationship remains unchanged. Yet, the absolute gap in voting strength rises from 41 Members of Parliament (MP) to around 61. Parliament does not vote in proportions; it votes in absolute numbers. Governments are formed by numbers, and confidence motions, legislation, and constitutional amendments are decided by numbers. A 50% pro-rata increase may preserve the ratio while widening the numerical gap.

The 1976 freeze therefore embodied a federal compact: States that succeeded in population stabilisation would not see their political voice diminished for doing what national policy encouraged. That understanding should not now be thoughtlessly discarded.

There is also a misconception that delimitation and enlargement are inseparable. They are not. India has already shown that constituency boundaries can be redrawn without changing the

S.Y. Quraishi

Former Chief Election Commissioner of India and the author of ‘An Undocumented Wonder – The Making of the Great Indian Election’

Delimitation, federal fairness and women's representation can all be achieved without enlarging the Lok Sabha

number of seats allocated to each State. The delimitation after the 2001 Census reorganised constituencies within States while maintaining the existing inter-State allocation.

That principle can be adopted again. The 2027 Census can provide the basis for redrawing constituencies within each State so that populations are more evenly distributed. Boundaries can reflect demographic movement and urbanisation. None of this requires increasing the Lok Sabha beyond 543 or disturbing the present federal balance.

A continuously expanding legislature is also not an inevitable consequence of population growth. The United States House of Representatives has remained at 435 voting members (there were some temporary exceptions) for more than a century despite enormous population growth. Switzerland's National Council has remained at 200 members since 1963. Going a step further, Hungary reduced its Parliament from 386 members to 199, while Italy reduced its Chamber of Deputies from 630 to 400. There is no democratic law requiring legislatures to grow whenever population grows.

Bigger House, weaker deliberation

There is another serious concern: what a larger House does to Parliament's own functioning. Parliamentary time does not expand with the number of MPs. Even with 543 members, many MPs hardly get opportunities to speak, ask questions or raise matters of public importance. A Lok Sabha enlarged by 50%, to more than 800 members, would reduce those opportunities further. It may increase representation numerically while weakening the quality of deliberation, one of Parliament's most important functions. Indian MPs already represent the largest average constituencies among the world's major democracies – several times the size of a U.S. congressional district or a U.K. constituency. Freezing the House at 543 while the population keeps growing means that burden only increases after delimitation, and the case for more representatives to improve accessibility is a real one. But it does not follow that the additional representatives must sit in Parliament. Most citizens approach elected representatives over roads, schools, hospitals, local services and State administration - matters substantially within the State sphere. If population growth has made constituencies unwieldy, strengthening representation at the State level is, therefore, a more sensible solution. More MLAs and smaller Assembly constituencies can bring representatives closer to citizens without continuously enlarging the national legislature.

That expansion faces none of the federal-arithmetic constraint that makes Lok Sabha expansion fraught. A larger Assembly shifts no balance between States – each answers only to its own population. Vidhan Sabhas can therefore grow to meet accessibility needs without disturbing the inter-State balance in Parliament that the 1976 freeze was designed to protect. Then comes women's reservation.

India's return to its Central Asian neighbourhood

Prime Minister Narendra Modi is set to travel to Central Asia in the next few days, the first port of call being a state visit to Uzbekistan, followed by participation in the meeting of Heads of State of the Shanghai Cooperation Organization (SCO) in the Kyrgyz capital, Bishkek, called Frunze in Soviet times. The change of names is not just symbolic. It represents the birth of a new region.

Central Asia is an evocative moniker. The region lies landlocked, situated between two giants, Russia and China. In most of its countries, the post 1991 generation has largely taken over, engaged in finding a new internal equilibrium. Islam is the main religion, but does not define identity and is therefore not a political project. The fight against radicalisation and terrorism is uncompromising. Occasional catastrophes such as the devastating Crocus City Hall terror attack in Moscow in 2024, China's constant fear of spread of radicalisation in the border regions and export of instability and extremist ideology from Afghanistan are everyday reminders of the challenges.

In Central Asia, there are a multitude of ethnicities, languages, geographies and resource endowments. These influence domestic and foreign policy choices, with Turkmenistan practising rigorous neutrality. Relations among countries are complicated by legacy disputes over borders, water resources and overlapping ethnicities. Türkiye and Iran are dominant influences, while the United States and the European Union are working their way in as Russia's hold weakens and China's grows.

Mr. Modi's 2015 visit to all five Central Asian countries was historic. It marked the end of an unstated Indian policy of deferring to Russia in its periphery – politely keeping away. In 2017, India was welcomed into the SCO as a full member by Russia, as Pakistan was, by China. To mark the 30 years of their independence/diplomatic ties, India

Pankaj Saran

Former Deputy National Security Adviser, Ambassador and Convenor, NatStrat

The Prime Minister's visit is an opportunity for India to deepen its strategic presence, expand economic ties and strengthen its diplomatic influence

made an unprecedented gesture of inviting all Central Asian leaders as chief guests for the Republic Day in 2022. The COVID-19 pandemic forced the event to be held only virtually, but not without it leading to the creation of high-level mechanisms for cooperation, including the India-Central Asia Dialogue.

Beyond geography

If South Asia and West Asia, not to speak of East Asia and the Indian Ocean Region are India's neighbourhoods, Central Asia is no less. A lack of overland connectivity does not take away from the civilisational links India has with the region – in culture, religion, language and architecture. Geographically, India and Tajikistan are separated only by the narrow Wakhan corridor that lies in Afghanistan. India is part of the continuum that is the Eurasian landmass.

Pakistan, a historically new piece in the equation, seeks to usurp the historical lineage based on religious affinity. Its tactic to cut India off, physically and otherwise, from these historical connections, like its other India-centric gambits, is, as anecdotal evidence shows, doomed to failure. Yet, India must not allow this to succeed. Countries of the region are today looking beyond Russia and China for partners in their socio-economic development. India's lived experience as a plural, moderate and democratic society is admired not feared in the region.

It is against this background that Mr. Modi's decision to go back to the region must be welcomed. India should build upon the foundations to consolidate its rightful place in the region, whether in the economic, trade, defence, natural resources, technology spheres or in softer areas such as cultural, educational, health and tourism exchanges. The choice of a state visit to Uzbekistan is consistent with the steady improvement of relations under President Mirziyoyev since 2016. It is among the most

One-third reservation for women is now being connected with delimitation, and enlargement of the Lok Sabha is presented partly as a way of accommodating women without disturbing existing political interests.

But women's representation should not become a constitutional justification for enlarging the House. One-third of the present Lok Sabha is approximately 181 seats. Women can receive their constitutionally promised representation within the existing House of 543. The purpose of reservation is to alter who occupies parliamentary seats, not necessarily to create hundreds of additional ones.

A 50% expansion could produce a curious result: the number of women MPs would rise, which is desirable, but so would the numerical dominance of the already larger States. A reform intended to correct one representational imbalance could deepen another. Women's representation and federal fairness are both legitimate constitutional objectives. India need not choose between them.

Preserve 543, undertake reforms

The solution is simple: retain the Lok Sabha at 543; preserve the present inter-State distribution of seats; undertake delimitation within States on updated population figures; implement women's reservation within that structure; and expand the Vidhan Sabhas to absorb the accessibility pressure that population growth has created.

For half a century, States have pursued demographic policies knowing that successful population stabilisation would not reduce their parliamentary influence. Southern States in particular invested heavily in education, health care and family welfare and achieved fertility levels that national policy itself encouraged. To reward that success with a larger political advantage for States where population grew faster would invert the incentive the Union deliberately created.

The question, therefore, is not whether population should matter. Of course it should. The question is whether it should now mechanically rearrange the federal political balance that India consciously preserved for five decades. Twice before, Parliament amended the constitutional framework to preserve the existing inter-State allocation despite population changes. There is no reason it cannot do so a third time. The uncertainty over whether Parliament may be recalled makes this more than an academic debate. Decisions taken now could shape the federal balance of the Republic for decades.

Delimitation is necessary. Women's representation is overdue. Updated constituency boundaries are desirable. But none of these objectives requires an 800-plus-member Lok Sabha.

Sometimes constitutional wisdom lies not in making institutions larger, but in preserving the balance that has allowed them to endure; 543 has served India for more than half a century. There is a strong constitutional, federal and democratic case for letting this number remain 543.

dynamic countries of the region, and most forward in the diversification of its foreign policy. Any Indian visitor to Tashkent, Samarkand or Bukhara will vouch for the empathy and resonance between the two peoples.

There are also hardnosed reasons – Uzbekistan has been uncompromising in its fight against terrorism and extremism. Its intimate knowledge of Afghanistan, and pragmatic approach towards the Taliban, are of key importance to India. India has had detailed discussions with it on alternative rail and road connectivity routes through Iran and Afghanistan which need to be revisited in the light of recent developments in these countries.

India and the SCO

Starting from the small beginnings of the “Shanghai Five” in 1996, the SCO, in its 25th anniversary, has grown to 10 members, 15 dialogue partners and two observers. With the exception of 2024, Mr. Modi has been a regular participant in SCO Heads of States meetings. India's SCO engagement is driven by geography, not ideology. Within the SCO chambers, negotiating against a China-Pakistan dyad is demanding but essential. India has kept its head above the swamp by suggesting several ideas to enhance cooperation in the economic, technological and civilisational fields. In Tianjin last year, Mr. Modi put forward the vision of security, connectivity, and opportunity for the SCO. In the instant case, for a country as overwhelmingly dependent on China as Kyrgyzstan, the SCO, and India in particular, offers a valuable geopolitical lifeline.

Taken together with his visits to the Indian Ocean Region last month, Mr. Modi would have traversed far-flung corners of India's maritime and continental neighbourhood in quick succession reflecting India's geostrategic imperatives and opportunities.

LETTERS TO THE EDITOR

A Himalayan disaster

Two major factors behind the Nepal disaster are its mountainous terrain and the intensity of the cloudburst or the melting of glaciers in the higher Himalayan ranges. The steep slopes would have

allowed gushing water to reach the plains quickly; they can also become death traps for those caught in sudden downstream flows. While the media is still trying to assess the toll, it is certain to run into the thousands. This particular

disaster is unprecedented in the scale of its destruction, with hundreds of villages and small towns wiped out. It is truly heartbreaking.

V. Lakshmanan,
Tirupur, Tamil Nadu

Post-disaster relief is no

longer enough. It is most essential that Himalayan nations must collaborate on joint early-warning networks, real-time data sharing, and resilient infrastructure.

Kshirasagara Balaji Rao,
Hyderabad

Revive cultural institution
Tamil Nadu's apex cultural body, the Eyal Isai Nataka Mandram, is inactive, while the Kalaimamani State awards remain suspended. The TVK government should revive the institution, reconstitute its

executive/general councils, and reform the awards process by separating classical arts from cinema.
V.P. Dhananjayan,
Chennai

Apoorvanand

Professor in the Hindi department of the University of Delhi

Ganesh Devy

Former professor of English and the man behind the People's Linguistic Survey of India project

PARLEY

The Supreme Court has been discussing linguistics this month while hearing challenges to the CBSE's three-language formula, which mandates that two of the three languages must be native Indian languages, a category that does not include English. The top court had wondered whether it was correct to treat English as a "non-indigenous" language, given its long history in the country, and its role as a link language in governance and higher education. So should English be considered a foreign language in India? Apoorvanand and Ganesh Devy discuss the question in a conversation moderated by Priscilla Jebaraj.

Is English a foreign language in India?

Apoorvanand: No. It came from outside the geography that we define as India now. But it has been Indianised. We cannot now say that English is foreign to the soil because it's being used in different forms and for different purposes by people across India.

Ganesh Devy: Hindi and English are born of the same Indo-European language family. One part of that family came to us 3,500 years ago; that was Sanskrit and one of the descendants of Sanskrit is Hindi. Another part came through Europe 400 years ago, in the 17th century. So, they both belong to the same root language, and both of them have come to us at different times.

In fact, the only major indigenous language in India is Tamil as it does not come from outside. But for that reason, we cannot impose Tamil on all students. Similarly, we cannot impose English or Hindi. So in India, the language question cannot simply be seen in terms of which is foreign, which is indigenous.

The history of English in India includes both imperialism and the freedom movement, Macaulay and Gandhi. How has this complicated the issue?

GD: Macaulay's minute is relatively recent, dated 1835; the East India Company had started using English in India almost 230 years before that. The interaction between English and other languages started in the 17th century and intensified during the 18th century. In the 19th century, the English governors in Calcutta, Bombay, and Madras insisted on teaching children in native languages, that is, the regional languages. Elphinstone very clearly gave written instructions to teach children in Gujarati and Marathi in the Bombay presidency. But by 1835, the East India Company was thinking of how to bring in legislation to replace Persian, which had been kind of a national language connecting India for several centuries, and that is when Macaulay came in.

AP: English came as a language of traders and

A semi-open class in a school in New Delhi on January 24. R.V. MOORTHY

missionaries and gradually became the language of the administration and the state, but then it also became the language of education. We see an elite being formed through English and also the formation of nationalism or nationalist ideas through English. So that's a very complex journey. We cannot treat English as a simple imposition on Indians. Indians adopted it, domesticated it, and then used it against those who had colonised India. Then, it became a language of liberation for many communities who did not have access to education or knowledge for generations.

English has become the language of aspiration and status. How does that impact social and political dynamics?

GD: The creation of an English-speaking elite has to be seen in the historical context of an earlier experience, where Sanskrit had formed an elite which brought in the *varna* system. The English language created an elite in India who tried to change that system and make India a modern society. Moreover, in India, in order to get a good job one often needs to migrate outside one's State. And as soon as migration is involved, the need for English is enhanced.

AP: English is connected with social mobility as well as geographical mobility. No other language gives you this advantage.

According to the 2011 Census, 10% of the Indian population speak English, and the numbers are only increasing. Has this resulted in the suppression of other Indian languages or has it spread multilingualism?

AP: It would be very simplistic to make a direct cause and effect relationship, because multi-linguality is a feature of India and there are different reasons for which people use different languages at different levels. In my Delhi classroom, the students are largely from the so-called Hindi belt. But for most of them, their home or street language is actually Bhojpuri or Braj or Avadhi or Maithili. So there are many languages which live side-by-side,

We cannot treat English as a simple imposition on Indians. Indians adopted it, domesticated it, and then used it against those who had colonised India. It became a language of liberation for many communities

APOORVANAND

performing different functions.

Being a teacher of Hindi, I regret that Hindi is in fact erasing many languages, which had a very rich tradition and which are living languages such as Maithali or Braj or Avadhi or Dondari or even Adivasi languages, because the state is not investing in them. They have now become oral languages, pushed to the margins, while all attention goes to Hindi. It's Hindi imperialism in Hindi areas; Hindi is a coloniser.

What is the impact of the rise of English as well as Hindi on other languages?

GD: First, let me say that the Census of India is not at all a clear mirror as far as language is concerned. For example, if a language is spoken by less than 10,000 persons, the Census says it is not a language. Then, if you look at how many individuals are studying in universities in India, the total figure at any given time in the last 10 years would be about four crore. Each one of them know English as a second language because English is the language of higher education, and yet the Census does not reflect those figures.

Hindi has been gulping other languages. In the Census itself, some 56 other languages are included as subsets of Hindi. There is a language called Pawri which is spoken by the Pawra Adivasi community, on the border of Maharashtra and Madhya Pradesh, who do not understand Hindi at all. Yet that is shown as a subset of Hindi. It is the same with Tamil, Kannada and Marathi. All smaller languages are being shown as subsets of larger languages and that comes from the state's desire to have some kind of linguistic unity.

India is made of many languages and that is the fundamental truth. Just last week, in Maharashtra, rickshaw drivers and taxi drivers were on strike because there is a compulsion that they have to pass an examination in Marathi, based on grammar. Why would a taxi driver need Marathi grammar? He has functional Marathi. Indians speak a lot of functional languages. They speak English, not as the British do, but as a functional language. They speak Hindi all over India as a functional language. And I think we should never forsake the beauty of having multiple functional languages in our pocket, in our hearts, and in our brains.

But there is also a vested interest in English in India from English language publishers and English medium schools. They bat for the continuance of English partly out of commercial

interest. I don't agree with that.

AP: On the CBSE and their stress on a three-language formula, and the insistence of policymakers that they want children to learn the mother tongue – all this is farcical because people know that all these policymakers are sending their own children to English medium schools and that English is social capital, cultural capital, and capital in real terms.

There's also a significant amount of Indian literature written in English today, including works in translation. And of course, films and the Internet freely mix languages. How does that change the debate?

GD: In the 6th, 7th, and 8th centuries, many Indians produced books in Sanskrit. Then, in the 15th and 16th centuries, India was producing more books in Persian. Today, India is producing more books in English than they produce in England. But our desi languages have still survived.

So the production of books, movies, and songs in a certain language is not necessarily an indication of a profound fundamental cultural shift. There are just two small questions to be asked to anybody who is writing English fiction or non-fiction. The first is, when that person goes into any spiritual space, is their prayer also in English? The second question is, is the audience only Indian or is it a global audience? The answers to these two questions will reveal the exact significance of the shift.

By the way, the English came here and had an impact on many things. But Indian music remains Indian music. We have internalised but not replaced. So, our cultural reception of English culture has been calibrated, granular, and is not wholesale as in Australia, U.S. or in Canada where native cultures were wiped out.

AP: I would disagree with that. For example, in my daughter's generation or the generation after, their first love in music is through English and not "Indian music". I don't see any problem in that and I don't see them as culturally uprooted. Would we say that this young generation or those bands which sing only in English are not culturally Indian? It's a very complex concept and the whole anxiety about maintaining nativity and creating a difference between what is indigenous and what is foreign is also problematic. Therefore, I would like to argue that English has made India its home. Those who want to declare that it's a foreign language, in fact, want to hide the fact that Hindi colonises other languages and so do Tamil and other languages, when you create these as meta languages and others as sub languages.

NOTEBOOK

Rajinikanth, a secret Chennai park, and a Gandhi impersonator

Stories don't always begin with pitches; sometimes, they can emerge from unexpected gates and casual strolls

Srinivasa Ramanujam

The best stories in journalism are not necessarily the ones that begin with a strong pitch, or take hours of research and painstaking reporting; sometimes, they are the ones that a reporter simply discovers along the way.

Recently, I challenged myself to find the place where actor Rajinikanth had shot his first film, *Apoorva Raagangal*, in 1975. Tamil cinema fans will remember the iconic shot of the newcomer pushing open a gate and striding into a house – almost as if announcing his arrival in filmdom.

I was determined to find this gate and the house.

Armed with a few clues from old-timers, I managed to find it at a dead-end street in a quiet Adyar neighbourhood. The gate had changed, but the house was spectacularly intact, almost exactly as it had appeared in the old Tamil film starring Rajinikanth and Kamal Haasan. We spoke to the owners and shot a video in which I mimicked the way Rajinikanth strode in, standing at the exact same place.

Story done, I was ready to head out when I chanced upon a small gate on the opposite side. It looked like the entrance to a park, but seemed deserted. Curious, I walked in, only to discover a walk-through park along the Adyar river. It was one of the most beautiful sights I had seen in Chennai, a city I have lived in for over four decades.

In some strange way, the wooded trail and quiet pathway felt like they belonged to me. Ever since this discovery, I've dragged along all my favourite people to experience it and take a stroll. I wrote about it too, while refusing to divulge the exact location lest it become too crowded.

Another time, a visit to a popular landmark led me to a story I wasn't looking for.

On a boring weekend afternoon, after a Sunday nap, my daughter pestered me to take her out. We decided to head to the Marina Beach for some fresh air and to try our hand at balloon shooting. As we strolled towards the sea, something odd caught my attention: a man dressed as Mahatma Gandhi, his body covered in silver paint, standing completely still. He would occasionally wave at children, but otherwise he looked like a statue. He had a box in front of him and even a QR code stuck to his trousers for those who preferred digital payments.

I asked him for his number and he mumbled something in Telugu. Days and many conversations later, with the help of a translator, I wrote about this man from Khammam in Telangana who dresses as Gandhi.

He said with regret that people were forgetting Gandhi and this was his way of reminding them about the father of the nation. This was also one way in which he was saving up for his daughter's wedding.

The same happened in Varanasi, where a casual stroll along Assi Ghat led me to a unique training ground for *gusthi* wrestlers. Before long, another story fell into place: I found that many young boys and girls go to the ground for strength training and learn *gusthi* in order to participate in local tournaments. Varanasi may be known for its spirituality, but physical fitness too is deeply woven into its culture.

One of the cardinal rules of life, and perhaps even more so in journalism, is to be curious, not judgmental. Curiosity is often the starting point for stories that reporters never set out to find.

As a journalist, it's not always about finding a story; sometimes, it's about allowing the story to find you.

Thanjavur teak to be auctioned

Tiruchi, August 27: For the first time teak grown on canal banks in Thanjavur will be put on auction by the Forest Department, Mr. K.A. Bhoja Shetty, Chief Conservator of Forests and Mr. Venkatakrishnan, Conservator of Forests, Tiruchi circle, said here to-day.

The Tamil Nadu Forest Department has proved that teak could be profitably grown on canal banks, they added and paid tributes to Mr. V.S. Krishnaswamy, erstwhile Chief Conservator of Forests, at whose initiative the Department took up teak cultivation on the canal banks of the Cauvery delta in Thanjavur district in 1955-56.

To-day teak has been raised over the entire network of the canal system in Thanjavur district covering an area of 8,000 hectares.

The first auction of the Thanjavur teak will be conducted on September 3 at Saliamangalam before the Conservator of Forests. All along teak came from the western ghats and hereafter at periodical intervals of three or six months, Thanjavur teak would be auctioned.

At the first auction over 2,500 poles would be available for bidding, Mr. Bhoja Shetty said.

Mr. Shetty added that similar teak plantations had been raised throughout the Cauvery baks and Tambarabarani bank belts.

NEWS IN NUMBERS

Number of people at risk in Peru due to El Niño

1.2 million. The El Niño weather phenomenon, which has brought some rain and an unexpected rise in temperatures to Peru, could put more than 1 million people at risk in regions of the country vulnerable to climate change, according to national authorities. “Based on historical data from all the regions... approximately 1.2 million people could be affected,” they said. REUTERS

Number of migrants pulled from sea off Mauritania

160 The Mauritanian Coastguard said on Thursday that it had rescued more than 160 migrants, including 17 children, from a boat in trouble off its coast, its second major emergency operation in a week. The migrants were “exhausted by the journey and the insecurity of the vessel” when they were rescued, a Coastguard statement said. AFP

Budget approved by Taiwan lawmakers for locally made drones

7.6 in \$ billion. Lawmakers in Taiwan approved a \$7.6 billion budget for locally made drones on Thursday as the island democracy seeks to strengthen its defences against a potential Chinese attack. Taiwan has ramped up military spending in recent years and is building up its defence industry to make equipment and ammunition on the island. AFP

Number of Indian coal power plants with critical low fuel

45 Forty five power plants in India are operating with critically low coal inventories, government data showed, as monsoon rains disrupt supplies and electricity demand rises. The plants with coal stocks below 25% of their required inventory or with critically low stocks to generate power for less than three days has risen from 31 at the end of July, the data showed. REUTERS

Ladakh's revised VAT on natural gas to boost clean energy adoption

5 in per cent. Ladakh Lieutenant Governor Vinai Kumar Saxena on Thursday announced a significant reduction in value-added tax on natural gas from 21% to 5% to promote affordable clean energy and improve ease of living. He said the move would give a major boost to the Centre's larger plan to roll out the city gas distribution (CGD) network. PTI

Can India build a strategic fuel system?

India's proposed strategic-fuel programme would expand crude, LNG and LPG storage, but building reserves alone will not guarantee energy security; the system will work only if India can move the fuel through ships, pipelines and distribution networks, while having clear rules on ownership, financing, and replenishment

EXPLAINER

Kalyan Mangalapalli

The story so far:

West Asia-related disruptions have exposed a vulnerability in India's energy-security system. India can import large quantities of crude oil, LNG and LPG, but its ability to store, transport and release these fuels during a prolonged disruption differs sharply by fuel. India already operates underground strategic crude-oil storage and two underground LPG caverns, but has no operating underground natural-gas storage facility. Against this background, the government is considering a decade-long strategic-fuel programme that would add about 28 MT of crude-oil storage, 9 MT of LNG storage and 4 MT of LPG storage. Reuters reports that the proposed reserves are intended to provide nearly two months of crude and LNG demand and about six weeks of LPG demand. The programme remains under consideration and should therefore be treated as a proposed target, not committed capacity.

How much storage does India have today?

India's position varies considerably by fuel. For crude oil, Phase I of the Strategic Petroleum Reserve provides 5.33 MT of underground capacity, with actual storage of about 3.37 MT, or roughly 63-64% utilisation, across Visakhapatnam, Mangaluru and Padur. A further 6.5 MT has been approved under Phase II at Chandikhol and Padur.

However, execution on the Chandikhol project remains protracted amid ongoing land acquisition requirements and finalisation of commercial PPP frameworks.

LPG has a much smaller underground footprint. The Visakhapatnam and Mangaluru caverns together provide about 0.14 MT of capacity. A proposed 4 MT strategic reserve would therefore represent roughly a 30-fold increase in underground LPG capacity.

Natural gas presents the largest storage gap. India currently has no operational underground gas-storage facility. Its gas-security system instead depends on domestic production, LNG imports, import terminals, commercial inventories and pipelines.

These figures also highlight an important distinction between storage capacity and inventory. A facility has a physical capacity, but the fuel it holds can vary. Not all inventory is necessarily immediately accessible either. During a crisis, the critical measure is therefore not simply how many tonnes can be stored, but how much fuel is available and at what withdrawal rate it can reach consumers.

What does the proposed 9 MT of LNG storage mean?

LNG is particularly prone to confusion because India already has substantial LNG import and regasification infrastructure. A regasification terminal can receive LNG and convert it into natural gas, but its regasification capacity does not constitute strategic inventory.

LNG is stored as a cryogenic liquid at around -162°C, requiring specialised insulated tanks and boil-off gas management. Underground gas storage is different: LNG is first regasified and the resulting natural gas is injected into a depleted reservoir or cavern.

India already operates underground strategic crude-oil storage and two underground LPG caverns, but has no operating underground natural-gas storage facility. GETTY IMAGES

The PNGRB-ICF study provides a useful but narrowly defined stress test. Its 2030 scenario examined how much additional LNG infrastructure would be required to supply priority consumers for 20 days under stress conditions. It estimated a requirement of about 0.56-0.6 MT of LNG equivalent, achievable with roughly eight additional LNG tanks. The combined cost of the tanks and the associated strategic inventory was estimated at around \$1 billion. This was a scenario-specific estimate, not an assessment of India's overall strategic LNG requirement.

The proposed 9 MT strategic inventory is an order of magnitude larger. Against the ICF projection of roughly 58 MT of annual LNG imports, 9 MT represents about 56 days of imports – hence the description of approximately two months of LNG import cover. It does not mean two months of India's total gas consumption.

The difference is important. A 0.6 MT requirement addresses a 20-day priority-sector stress scenario; 9 MT represents a much broader strategic objective of buffering India against prolonged LNG-import disruption. The associated investment would therefore be substantially larger.

Does all the gas have to be stored as LNG?

No. India could eventually use a portfolio of surface LNG tanks and underground natural-gas storage.

Additional LNG tanks would hold inventory directly at import terminals. A separate proposal from the Ministry of Petroleum and Natural Gas would require LNG import terminals to maintain storage capacity 10% above their normal operating requirement, with the additional capacity available to the government during supply or price disruptions.

For longer-duration requirements, depleted oil and gas reservoirs, which account for 74% of global working gas volume, could provide much larger volumes of underground gas storage. Salt caverns offer different advantages: faster injection and withdrawal and the ability to cycle inventory more frequently, potentially making them useful for

shorter-duration balancing.

But a depleted field cannot simply become a storage site because production has ended. Reservoir characteristics, cap-rock integrity, pressure behaviour, existing wells, cushion-gas requirements and pipeline connectivity must all be assessed. India's sedimentary basins – including Krishna, Godavari, Cambay, Mumbai Offshore and Rajasthan – offer potential locations, but moving from geological potential to usable storage requires subsurface investigation, site selection, engineering, construction, testing, filling and pipeline integration.

Salt caverns face a similar qualification process. Rajasthan's salt-bearing formations have been investigated for solution-mined caverns, but suitability depends on depth, thickness, purity, geometry, groundwater and mechanical properties.

Can India scale its crude and LPG experience?

Crude is the most mature component. India already operates underground crude caverns and has developed the associated engineering capabilities. The U.S. Strategic Petroleum Reserve illustrates the scale possible with salt caverns, with authorised capacity of 714 million barrels across 60 caverns. But the U.S. system works as an integrated network of caverns, pipelines, marine terminals and refineries. Storage is therefore fundamentally an infrastructure system, not simply an underground space.

LPG is technically proven in India but presents a much larger scaling challenge. A proposed 4 MT reserve would require a substantial network of new caverns or other storage facilities, together with import terminals, pipelines, pumping systems and bottling infrastructure.

The Mangaluru cavern illustrates the complexity. Underground construction requires geological and hydrogeological investigation, rock-mechanics analysis and groundwater management, particularly where work takes place alongside operating surface facilities. Scaling the system would require sustained capabilities in geophysics, geomechanics, tunnelling, reservoir engineering and project execution.

What happens if the fuel cannot reach India?

Because energy security relies heavily on maritime logistics, including vulnerable chokepoints such as the Strait of Hormuz and long-distance routes from the U.S., India is proactively diversifying both its import sources and shipping capabilities. To reduce reliance on foreign vessels, State-run oil refiners and the Shipping Corporation of India plan to invest \$1.5 to \$2 billion in a joint venture to acquire 59 ships. Simultaneously, Indian Oil is expanding sourcing through new 2027 agreements with Algeria and increased U.S. purchases, while exploring direct stakes in Very Large Gas Carriers to secure greater control over its supply chain.

What about pipelines?

Pipelines provide the final link between imported or stored fuel and inland consumers. PNGRB has recently authorised approximately 1,800 km of new LPG pipelines across six States, involving investment of around \$0.7 billion. These pipelines improve connections between supply sources and inland markets and reduce dependence on road movement, but they do not themselves add strategic storage. Their value lies in improving deliverability.

The same principle applies to natural gas. Underground storage is useful only if it can inject into and withdraw from the gas grid at the required rate. LNG tanks are useful only when regasification and downstream pipelines can move the gas. LPG caverns require connections to bottling and distribution systems.

Who pays for the strategic reserves?

The reported \$42 billion programme, which has yet to be confirmed by the government, combines infrastructure CAPEX with the cost of purchasing and maintaining strategic fuel inventories. Reuters reported that more than half could go towards storage infrastructure, with the balance used to purchase and fill the reserves. Financing would be a challenge and the government shot down reports that a cess would be charged to pay for the reserves.

The financial obligation does not end with construction. Billions of dollars of fuel would need to be purchased, financed and maintained. Stocks released during a crisis would then have to be replenished, potentially when commodity and freight prices are higher. The policy therefore needs to establish who owns and finances the inventory, minimum stock obligations, emergency-release authority, and who bears replenishment and price risk. A commercial-cum-strategic model could reduce the public burden, provided commercially used capacity remains available during emergencies.

Is storage enough to make India energy-secure?

Building 41 MT of combined storage is only part of the equation. A strategic reserve is effective only if India can seamlessly access fuel, transport it inland, and replenish stocks after a release.

Ultimately, energy security relies on an integrated framework: reserves buy time, shipping brings the next cargo, pipelines deliver fuel inland, and governance dictates emergency execution. The ultimate test of India's strategic fuel programme will be its ability to coordinate all these elements simultaneously when a crisis hits. (The author is an Energy and Emerging Technologies expert)

THE GIST

India's existing strategic storage differs sharply by fuel, with crude having the most developed system, LPG a limited underground footprint and natural gas no operational underground storage facility.

The proposed 28 MT of crude, 9 MT of LNG and 4 MT of LPG reserves would represent a major expansion, but the LNG requirement should not be confused with existing regasification capacity or narrower 20-day stress scenarios.

Geological suitability, infrastructure and project execution will determine how quickly storage can scale, while shipping and pipelines remain critical to ensuring fuel reaches consumers during prolonged disruptions.

IN THE LIMELIGHT

Gulzar at 92: the remarkable art of staying relevant without ever standing still

Gulzar's career across poetry, lyrics, cinema, television, translation and children's writing has been marked by an unmistakable voice, reinvention and an incorruptible curiosity; his work has reached generations through its emotional heft and rare ability to distil the mundane into exquisite poetry

Kalyan Sundareswaran

A river runs for centuries and yet belies the idea of permanence. It flows away as it flows in, can both flood and run dry, take in tributaries, change course and annex newer territories. A long creative career carries a similar paradox. While retaining an essential recognisable voice, it must continually acquire new vocabularies. For over seventy years, Picasso painted and sculpted with evolving brilliance not merely surviving shifting artistic movements but actually spearheading most of them.

And there is not a more compelling Indian parallel to this than Gulzar. Rarely has someone spent decade after decade at the very summit of multiple demanding public crafts, without a prominent phase of decline and without the grandiosity that often accompanies greatness. An influential Urdu poet, a lyricist, a film and television director, author, screenwriter, children's writer, translator, Gulzar has looked into this world through every possible lens and the world too has looked back gratefully, bestowing on him some of the highest national and international honours, from the Dadasaheb Phalke Award to the Jnanpith Award, and from the Oscar to the Grammy. To tweak one of his own lines he wrote for the film *'Anand'* (1971), his career has not just been extensive but expansive too (*Zindagi badi honi chahiye, lambi nahi*).

Gulzar came to film songwriting at a time when the lyricists' fraternity was a formidable roll-call of masters such as Shailendra, Sahir Ludhianvi, Shakeel Badayuni, Rajendra Krishan amongst others. Gulzar wrote his first film song for Bimal Roy's *'Bandini'* – *Mora Gora Ang Laile* set in Vaishnava verse. And right away, he had found his niche as a lyricist in a roomful of titans.

A voice of his own

Though bound by the strict film song conventions of metre, rhyming, musicality, situations and the need to fit lyrics into a pre-composed tune, Gulzar has always commanded a singular, unmistakable idiom. While this signature is instantly perceptible, it defies easy definition. The style is a curious blend of abstraction (*Is mod se jaate hain* from *'Aandhi'*), symbolism (*Wo Yaar hai Jo Khushboo Ki Tarah*, *Jiski Zubaan Urdu Ki Tarah* from *'Dil Se'*), poetic flourish (*Do Nainon Mein Aansoo Bhare Hain*, *Nindiya Kaise Samaye* from *'Khushboo'*), paronomasia (*Sare ke Sare gama Ko Lekar Gaate Chale* from *'Parichay'*), political messaging (*Haal Chaal Thiik Thaak Hain* from *'Mere Apne'*), allusion to nature (*Hawaon Pe Likh Do* from *'Do Dooni Chaar'*), vivid imagery (*Chhote Chhote sheheron* from *'Bunty Aur Babli'*), dark humour (*Goli Maar Bheje Mein* from *'Satya'*), arcane vocabulary (*Aab-o-dana dhoondhte hain ek aashiyaana dhoondte hain* from *'Gharonda'*), a rich worldview (*Aane Wala Pal* from *'Golmaal'*), and above all, an emotional heft (*Humne Dekhi hai In Aankhon Ki Mehekti Khushboo* from *'Khamoshi'*) that can entirely ambush a listener mid-song.

Critics may argue that such sophistication is at odds with a "film" song, a form expected to resonate with the masses without demanding much of

Gulzar. FILE PHOTO

interpretive labour. And yet Gulzar has repeatedly proven otherwise. Many of his songs have captured popular imagination like none other, such as *Humko Mamm Ki Shakti Dena* from *'Guddi'*, a regulation prayer song in schools even today, or *Beedi Jalaile* from *'Omkaara'* oozing a rustic exuberance or the infectiously playful *Kajra Re* from *'Bunty Aur Babli'*. Despite his uncommon idiom, his songs have found universal acceptance, aided by composers such as R.D. Burman, A.R. Rahman and Vishal Bhardwaj who have matched their crafts effortlessly to his calibre.

The same intellectual courage defines Gulzar's trajectory as a filmmaker and a screenwriter. Many of Gulzar's films have been adapted from works of literature. As a writer himself, he could easily find a story's emotional register and seamlessly infuse it into cinema with sensitivity to things like language, character, subtext, silence, refrains and motifs. He also made films which were topical, championed progressive values, spoke truth to power, presented nuanced worldviews and asked uncomfortable questions all without ever tipping into preachiness. His debut film *'Mere Apne'* placed disaffected youth at the centre of a story about political disillusionment and loneliness. His *'Aandhi'* was a political drama which gave its female lead enormous agency, where the male lead plays second fiddle to her. His *'Mausam'* delicately handles the misplaced romantic affection a sex worker feels for her own biological father, a narrative choice most directors would have flinched at back then. His *'Maachis'* was a bold and layered exploration of

radicalisation set against the Punjab insurgency, probing raw wounds without pointing fingers. He has never been the one to take the easy path, neither in his choice of subjects nor in his treatment of them.

Beyond the world of cinema

As a poet and a prose stylist outside films, Gulzar has been nothing short of prolific. His Partition stories carry the emotional authority of having experienced it first-hand. He has written for children with the same sincerity he reserves for adult readers. His poetry seamlessly moves between the formal architecture of the Urdu *ghazal* and *nazm* and the autonomy of the free verse. He is also the creator of the *Triveni*, a three-line verse akin to an Indian *Haiku* whose third line, with a sleight of mind, entirely alters the emotional meaning of the first two. Translations are a telling part of Gulzar's oeuvre. Apart from translating literary giants such as Tagore and Kusumagraj independently, he has also translated several scores of contemporary poets across all Indian languages, which have been anthologised in his *A Poem a Day*. What emerges from this vast body of work is simply a relentless love not just for the written word but also for the reader and a rare ability to distill the most mundane into exquisite poetry. Gulzar is like the itinerant water-carrier whose vessel continues to pour out to generations of thirsty readers and yet always remains filled to the brim.

Another remarkable aspect of Gulzar is his unmitigated affection and respect for his seniors and peers that runs through

his work, somewhat like the moon borrowing the sun's luminosity but making it gentler for the passage. Be it in his biographical sketches or in his long-form interviews or even his adaptations of their lives and works, there is an unfeigned humility and a willingness to let someone else's genius stand taller than his own. He has quoted or paraphrased other poets such as Khusräu, Ghalib and T.S. Eliot in his works, showing how grounded and secure he is in his own craft. His narratives on the likes of his mentor Bimal Roy, his friend R.D. Burman, his seniors Shailendra, Sahir, Faiz and many others are full of tenderness. His television serials *Mirza Ghalib* on the life of the talismanic Urdu poet and *Tehreer Munshi Premchand Ki* too are glorious cases in point.

The Gulzar phenomenon

Yet, his towering stature has ironically birthed a curious modern phenomenon. Having assumed a quasi-mythological status amongst the masses, Gulzar's name is routinely invoked to lend gravity to mediocre verse he never wrote. The Internet is awash with lines misattributed to him to confer credibility and heft to anything vaguely poetic. It is an irony of our times that the more a voice commands our trust, the more it is forced to speak words it never uttered. Though a vigilant community of admirers actively combat this digital misattribution through the hashtag #NotByGulzar, its sheer volume shows how perversely his poetic persona has permeated the public consciousness, more as a brand to be flaunted rather than the painstaking artist he has always been.

In an age of public posturing where dilettantes know just enough to make sparing content for mindless scrollers with decreasing attention spans, where flamboyance is rewarded more than moderation, where the patient romance of Test cricket has lost ground to the tillations of T-20, Gulzar stands as a raging testimony to longevity and restraint. His endurance is less owing to a kind bargain struck with time than to his rigour, his resilience as a man of his craft and his incorruptible curiosity that still propels him to say things and find new ways of saying them.

In one of his own songs from the 80s film *'Hip Hip Hurray'*, he writes: *Roz tere jeene ke liye ek subah mujhe mil jaati hai*

Murjhati hai koi shaam agar to raat kahin khil jaati hai

Main roz subah tak aata hoon, aur roz shuru karta hoon safar

Haath badha ae zindagi, aankh milake baat kar

(Everyday to live by you, I find a morning bright

Even as the evening withers, out blooms the night

I get to the morning everyday, and start my daily streak

Give me your hand, life, look me in the eye and speak)

As Gulzar turned 92 this August 18, 2026, what sets him apart is his ability to repeatedly meet life with the alertness of someone encountering it for the first time, look it right in the eye and dare to chronicle its triumphs and sorrows with fidelity and imagination.

Know your English

S. Upendran

What is the plural of “staff”? (S. Srinivasan, Madurai)

If you are thinking of people working in an organisation, then the plural is “staff”.The word is an uncountable noun. In most universities, for example, we have teaching staff and administrative staff. Like the nouns “jury”, “government”, etc., the word “staff” can be followed by either a singular or a plural verb. Here are a few examples.

The staff is of the opinion that we should go on strike.

The staff were excellent.

The word is normally not used to refer to a single individual. If you wish to refer to a single person, then you could say “staff member”, “staff person”, etc. Some people use the word “staffer”; not everyone, however, accepts this word.

What is the difference between ‘fairly’ and ‘rather’? (B. Lakshmi Chandrasekhar, Vijayawada)

“Rather” is the stronger of the two words. When you say that the movie was “rather good”, it implies that it was pretty good; it was much better than you had expected. So in your opinion, people should go and see it; you recommend it. On the other hand, when you say that it was “fairly good”, what you are implying is that it was ok. There was nothing great about the film; if the friend wants to, he/she may go and see it, but you wouldn't recommend it.

Similarly, when you tell someone that his English is “fairly good”, you are not really complimenting him. All that you are saying is that his English is ok. Here are a few more examples.

Jyothi made a fairly/rather good presentation.

During summer, it gets fairly/rather warm.

What is the origin of the expression “French leave”? (M. Ram Mohan, Narsampet)

This is another example of how much the English hated the French. I guess we shouldn't be talking about this now, considering the fact that the two have joined forces along with the United States to fight the Taliban.

But historically, the two nations couldn't stand each other. Even now, it is not uncommon for an Englishman to refer to a Frenchman as a “frog”, because the French consider frog legs a delicacy. The term “French postcards” is used to refer to picture postcards with naked ladies on them. When someone uses foul language, you can hear the person saying, “pardon my French” –thereby implying that the French had the habit of swearing.

When someone goes on “French leave”, he or she takes off without informing the authorities. According to the English, it was standard practice in France in the 18th Century to leave a ball or dinner without thanking the host and hostess. People left without even saying goodbye. The English felt that the French were people without manners. But what is interesting is that taking leave of someone in this manner is referred to as “English leave” by the French! What the Americans call “French postcards”, the French call “American postcards”.

It is interesting to note that countries, which have such a low opinion of one another, have come together to fight terrorism! I guess they don't mind the war of words.

THE DAILY QUIZ

On the occasion of Raksha Bandhan, here is a quiz on brothers and sisters

V.V. Ramanan

QUESTION 1

In politics, he was the first PM of his newly independent country, while she became the first woman President of the UN General Assembly in 1953. Name the famous siblings.

QUESTION 2

This famous 1807 work that narrated the works of a famous English playwright was authored by a brother-sister duo. Name them and the work.

QUESTION 3

According to historians, Ptolemy XIII and Ptolemy XIV were consorts and ruled alongside their sister, who is considerably more famous and legendary than the two men. Name her.

QUESTION 4

In later Ramayana traditions, what was the

name of Rama's elder sister, who was married to the sage who oversaw the sacrifice that Dasharatha performed for obtaining sons?

QUESTION 5

Name the Russian siblings who have not only won titles at a tennis Major but are the only brother and sister to reach the No.1 ranking in singles.

QUESTION 6

The National Bravery awards given by the Indian government are named after two teenagers who were murdered after being abducted in Delhi in 1978. Name the two.

QUESTION 7

In Greek myth, name the twins born to Zeus and Leto, with one becoming the god of prophecy, music, healing and archery and the other the goddess of the hunt, wilderness and childbirth.

Visual Question:

Name these siblings who have also won Oscars apart from the Grammys and other leading awards. AP

Questions and Answers to the previous day's daily quiz:

1. Who led the Visigoths who sacked Rome in 410 CE? **Ans: Alaric I**
 2. For approximately how long had Rome avoided being sacked by a foreign enemy before 410 CE? **Ans: Nearly 800 years**
 3. Which Roman emperor was ruling the Western Roman Empire when Rome was sacked? **Ans: Honorius**
 4. Which city served as the capital of the Eastern Roman Empire at the time? **Ans: Constantinople**
 5. Which Christian theologian wrote The City of God in the aftermath of the sack of Rome, addressing arguments that the rise of Christianity had contributed to Rome's troubles? **Ans: St. Augustine of Hippo**
- Visual: Identify the Roman writer who described the catastrophe with the words, “The City which had taken the whole world was itself taken.” **Ans: St. Jerome**
- Early Birds:** Siddhartha Viswanathan | Erfanally Oosmany | Suchit Narottam | Dodo Jayaditya | Parimal Das

States step up efforts to trace missing, stranded people after Nepal disaster

West Bengal launches efforts to find 32 pilgrims who travelled for Kailash-Mansarovar Yatra; former Union Minister Mukul Roy's daughter-in-law is part of the group; Isha Foundation in T.N. says pilgrim group of 80 from various countries missing; measures to bring back people being worked on

The Hindu Bureau
KOLKATA

Officials of several States stepped up efforts to trace people missing or stranded after the devastating flash floods in Nepal, with Chief Ministers urging departments to coordinate to ensure prompt rescue measures. The State governments were also in touch with the Centre to bring back stranded residents.

In West Bengal, the focus was on a group of 32 people who had travelled for the Kailash-Mansarovar Yatra and remained untraceable. Among the 32, at least 21 are senior citizens, and many others are in their late 50s. Sharmistha Bhowmik Roy, daughter-in-law of former Union Minister Mukul Roy, is also part of the group.

“The Government of West Bengal is actively coordinating with the Embassy of India in Kathmandu and proper administrative channels,” Chief Minister Suwendu Adhikari

Flood aftermath: Nepal army personnel comforting twin babies amid a search operation after the devastating flash floods at Trishuli camp; and Indian nationals, who were airlifted from Rasuwa district, sitting inside the Maithali Barrack in Nepal on Thursday. P.TI, REUTERS

posted on social media.

The group had booked their trip with Cholo Jai, a travel agency in West Bengal, and started from Kolkata on August 21. Samrat Travels, their partner company, handles the Nepal portion of the trip.

Cholo Jai staff were not able to establish contact with the group. According to the agency, the group left their hotel in Nepal's Rasuwagadhi on Wednesday morning and headed towards the China border. Around 8.30 a.m., they went to the immigration of

fice in the same area to cross over to Tibet. Rasuwagadhi is one of the worst hit areas in the flash flood.

“Today morning, four managers from our company went there to get local information and further details about the rescue operations. We are constantly in touch with families,” Manish Singh, a Cholo Jai staffer, told presspersons.

A film crew from Bengal is also stuck in Nepal. They are in a safe zone and accessible by phone.

In Tamil Nadu, Chief Mi-

nister C. Joseph Vijay directed Ministers and officials to oversee the rescue and safe return of people from the State. A total of 103 people from Tamil Nadu who had gone on a pilgrimage were stranded. Several of them were feared missing.

80 pilgrims missing

Isha Foundation, based in Coimbatore in the State, said a pilgrim group with 80 members of several countries, was missing in the floods.

The foundation has

reached out to the Embassies for authoritative information on the missing members, it added. In a video message from the Tibet side of the Chinese border, founder of Isha Foundation Sadhguru Jaggi Vasudev said the pilgrim group consisted of 34 men and 46 women.

The Keralam government confirmed that it received around 17 distress calls from families affected by the Nepal disaster. The government said it was trying to establish contact with the 53 stranded per-

sons from the State and ensure their safety.

Andhra Pradesh Chief Minister N. Chandrababu Naidu directed officials to maintain round-the-clock vigil on the Nepal situation and ensure all possible assistance.

Sources said seven from the State were reported missing or stranded. Four pilgrims from Adoni and Kurnool were found to be safe and staying at a hotel in China, while efforts continued to locate three others.

The four traced pilgrims were part of a 156-member Kailash-Mansarovar group, they added.

The Telangana government said it had provisionally identified 23 residents of the State who were stranded in Nepal. The State government was coordinating with the External Affairs Ministry, the Indian Embassy in Kathmandu and Nepalese authorities. On Thursday, the Ministry said at least 290 Indian nationals remained “uncontactable” after the tragedy in Nepal.

Taking stock: Bihar Chief Minister Samrat Choudhary conducting an aerial survey of the flood situation in border areas. P.TI

Water levels subside in Bihar rivers; risk of flooding reduces

Amarnath Tewary
PATNA

A day after a flash flood killed hundreds in Nepal and threatened to overflow into neighbouring Bihar, the risk of flooding in the Gandak, Ganga, and other tributary rivers subsided significantly on Thursday.

However, debris and cattle carcasses were seen in the Gandak river.

Chief Minister Samrat Choudhary conducted an aerial survey of the Valmikinagar barrage areas of West Champaran district along the Indo-Nepal border which had faced an imminent threat till Thursday afternoon.

“The way disaster had struck Nepal is a matter of

concern. The Prime Minister and Union Home Minister were continuously keeping a close watch on Bihar,” he told presspersons. “The situation is gradually becoming normal... The discharge at the barrage was around 1 lakh cusecs today,” he added.

Fearing a flash flood in the Gandak, all 36 gates of the Valmikinagar barrage had been opened on Wednesday. The barrage started witnessing three-metre-high waves and the water gush peaked at 1.5 lakh cusecs on Thursday afternoon. It then “started decreasing”, one of the senior engineers said.

Water levels also receded in the Ganga river at some places in Patna.

U.P. activates rescue teams, focuses on monitoring rivers in border areas

Mayank Kumar
LUCKNOW

In the wake of the flash floods in Nepal, the administrations of districts in Uttar Pradesh bordering the country said on Thursday that their focus remained on continuous river monitoring.

They focus was also on alerting vulnerable villages and keeping relief and rescue teams ready for any possible flood situation.

“Amid the floods and natural disaster in Nepal, the Uttar Pradesh government has taken charge, on the instructions of Chief

Family members of U.P. citizens stranded in Nepal may contact 1070 for information, says State govt.

Minister Yogi Adityanath, to ensure the safety of citizens of the State,” an official statement said.

The government has activated relief and rescue teams along with necessary resources to safely evacuate Uttar Pradesh citizens stranded in Nepal and provide them with immediate assistance. The Control Room of the Relief

Commissioner's Office is continuously monitoring the situation in the districts bordering Nepal, the statement said.

Platoon deployed

The State government has also deployed a 32 member platoon of State Disaster Relief Force (SDRF) for relief and rescue operation in Nepal.

“In addition, 22 personnel from the 26th Battalion of PAC have also been sent to Nepal. The government has made preparations to provide additional forces and resources as required, ensuring that there is no

shortfall in delivering relief to the affected people. Four rubber boats are already available at the site to make the rescue operation effective in flood-affected areas. An aluminium boat is also being sent to Nepal along with an additional SDRF platoon,” the statement added.

The government said that the entire focus was on safely evacuating stranded citizens and ensuring that aid reaches those in need. “Family members of Uttar Pradesh citizens stranded in Nepal may contact 1070 for any information,” it said.

The Hindu Bureau
GUWAHATI

A body of two ethnic communities in Sikkim has advised the Centre to learn from the flash flood disaster in Nepal and scrap all new and proposed hydroelectric projects in the Himalayan State.

According to the Nepal Electricity Authority, at least 13 hydropower projects along the Bhotekoshi and Trishuli River corridors suffered extensive damage.

The mudslide hit Gyirong port in Tibet and slammed into Nepal, creat-

The disaster highlights the vulnerability of the Himalayan region, requiring a fresh assessment of development activities

TSETEN TASKI BHUTIA
SIBLAC convenor

ing high-speed flash floods that washed away entire roads, power projects, and inundated villages. The 11-megawatt Rasuwagadhi Hydropower Plant in Rasuwa district of Nepal was among those affected.

On Wednesday evening, the Sikkim Bhutia Lepcha Apex Committee (SIBLAC) urged Prime Minister Narendra Modi to halt new hydropower projects in the State and order an independent probe into the existing projects.

SIBLAC convenor Tseten Taski Bhutia, also the chief adviser to the Sikkim unit of the BJP, expressed solidarity with the people of Nepal and hoped for the success of the relief and rescue operations.

“The disaster in Nepal highlights the vulnerability of the Himalayan region, requiring a fresh assess-

ment of development activities,” he said, insisting that the Centre should reconsider plans for new hydroelectric projects on Sikkim's rivers.

Seeking an independent inquiry into the environmental, geological, seismic, social, and national security implications of all existing and proposed projects, he urged the Centre to publish a White Paper containing the findings of such an assessment.

He said the group was not against development, but not at the cost of the ecological and social security of the area.

Rahul attacks Centre over NCLT plan for businessman

The Hindu Bureau
NEW DELHI

Congress leader Rahul Gandhi on Thursday accused the Centre of creating “two systems” in the country, one for a handful of billionaires and another for everyone else, after the National Company Law Tribunal (NCLT) approved a resolution plan allowing businessman Subhash Chandra to settle ₹22,006 crore dues for ₹6.5 crore.

In a post on X, Mr. Gandhi quipped that NCLT stood for “Neta-Company Loot Tribunal”. He said, “If a farmer doesn't pay 50 thousand, his land gets auctioned off. If a salaried person misses even one EMI, bank goons show up at the house. Poor students can't even get loans for education.” “But for select ‘friends,’ bank money is like personal property – withdraw as much as you want, repay whatever you feel like,” he said.

Congress leader Jairam Ramesh described the settlement as a “mundan”, saying it made “a completely mockery of the Insolvency and Bankruptcy Code, 2016”.

Security tightened at disputed Mathura temple amid ‘Kar Seva’ concerns, HC told

Ishita Mishra
NEW DELHI

The Mathura administration recently informed the Allahabad High Court that security arrangements were made at the disputed Krishna Janmabhoomi-Shahi Idgah premises amid concerns of ‘Kar Seva’.

‘Kar Seva’ was called by

Hindu religious leaders in Mathura for voluntary action to “liberate” the Krishna Janmabhoomi site.

The Bench, during the hearing of the Original Suit No. 4 of 2023, filed by the Shri Krishna Janmabhoomi Mukti Nirmaan Trust and others against the Shahi Masjid Eidgah Management Committee and oth-

ers, noted that the court had received a report in a sealed cover.

The report had originally been called for by the High Court on July 17, after a plaintiff filed an application asking the court to direct the State Government and local administration to prevent any individual or group from entering the

disputed site to hold meetings, perform Kar Seva, or organise events that might disturb public peace.

The court is presently hearing 18 suits that seek the removal of the Shahi Idgah, which they claim is an encroachment on the premises of the temple.

The matter will now be heard on September 18.

INBRIEF

LIC subscribes to Bajaj Finance's ₹5,000 cr. NCDs

LIC has subscribed to Bajaj Finance's ₹5,000 crore non-convertible debentures (NCDs). The insurer said it has subscribed to five lakh NCDs of face value of ₹1 lakh each, of the deposit-taking non-banking financial company, totalling ₹5,000 crore, LIC said in a filing. The instruments carry a coupon rate of 8.15% per annum and a tenure of 3,653 days. The first coupon payment will be on August 27, 2027 and annually thereafter. The maturity date of the NCDs is August 27, 2036.

KPR Mill to invest ₹1,225 cr. in greenfield projects, expansion

Coimbatore-based KPR Mill, which has integrated textile production capacities, is investing ₹1,225 crore in greenfield projects and expanding existing capacities. The company said it expects ₹2,000 crore additional revenue from the new facilities when they are commissioned and the entire capex will be met through internal accruals. KPR will also set up a new sweater manufacturing factory in Coimbatore at ₹75 crore to make 2.5 million garments.

HCL sets up GCC in Pune for German partner Wacker

HCLTech on Thursday announced that its partner Wacker Chemie AG, a German chemicals and biotechnology company, had established a Global Capability Center in Pune. The GCC, set up and operated by HCL, will support Wacker's engineering, IT and digital transformation initiatives, it said. The initiative marks an important milestone in Wacker's digital transformation," said Dr. Frank Fehler, Executive V-P and Country Head - Germany, HCLTech.

Zee's Chandra to pay ₹6.5 cr. under IBC vs. ₹22,000-cr. due

Lalatendu Mishra
MUMBAI

Top banks may face a 99% haircut via the National Company Law Tribunal (NCLT) ordering Zee Media Group founder Subhash Chandra to pay ₹6.5 crore against ₹22,006.57 crore due to creditors in personal insolvency proceedings. The NCLT went by the decision of 80.81% creditors who okayed Mr. Chandra's offer. The matter involved Indiabulls Housing Finance and personal guarantor Mr. Chandra.

The tribunal went by the decision of a majority of Committee of Creditors (CoC) who chose the offer. Allegedly they were related party and associated with Mr. Chandra and a large segment of creditors from Haryana whose claims were admitted by the Resolution Professional without examining the manner in which the alleged debts had arisen.

"The Repayment Plan submitted by the Personal Guarantor is required to be approved ...subject to exclusion of the claims submitted through Anil Kumar on behalf of 960 individuals and Sunil Jain on behalf of 300 individuals from the final list of creditors and consequential redistribution of the repayment amount among the remaining eligible creditors..." NCLT order read.

"The approved Repayment Plan will be binding on all the creditors," it said. In this case, the more than 88% creditors who willingly approved Mr. Chandra's proposal saw their credentials questioned by other creditors.

The creditors who opposed the repayment plan included Axis Bank, RBL

Subhash Chandra

Bank, IndusInd Bank, IDBI Trusteeship (for Franklin Templeton), LIC Housing Finance and Union Bank of India with a collective vote share of 19.186%.

Those who approved Mr. Chandra's plan included Appearance Corpcall Capital Advisors LLP, Catalyst Trusteeship, World Crest Advisors LLP, Direct Media Distribution Ventures Pvt. Ltd., Lemonade Capital Advisors LLP and Veena Investments Pvt. Ltd. allegedly associated with Mr. Chandra.

Multiple objections It was submitted multiple creditors raised objections against the inclusion and voting rights of some associate and related entities of the personal guarantor who together held about 61.78% voting share in CoC. As per RP Shiv Nandan Sharma, the personal guarantor's (Mr. Chandra's) estate, in the event of bankruptcy, may not be enough even to cover the expenses of the process. Therefore, the creditors may not be able to get any dividend from the bankruptcy trustee so they had accepted it.

However, a net worth certificate submitted by RBL Bank Ltd. in 2017 showed Mr. Chandra's net worth at \$7.17 billion,

A.P. to become third subsea hub on data centre buildout

The State is witnessing investments from tech giants Microsoft and Google, which are building fresh subsea cable infrastructure, currently concentrated in Mumbai and Chennai

Aroon Deep
NEW DELHI

As a result of data-centre buildout in Andhra Pradesh and Telangana, the former's coastline will soon hold new landing stations for subsea cables, which connect global internet with India.

On one hand, Microsoft is participating in a consortium with firms like Lightstorm and Singaporean telco Singtel to land the 3,600 km India-Southeast Asia (I-2SEA) Submarine Cable System, and Google has the globe-spanning America-India Connect system, which will land in Visakhapatnam, where the tech giant's datacentre complex is being built.

"As part of this AI hub... we're bringing in multiple new subsea cables that will land on the coast of Andhra Pradesh around the Vishakhapatnam area," Alexander Smith, a Google executive who oversees several of the firm's physical infrastructure projects in the Asia Pacific region, told *The Hindu* in an interview on Thursday.

"That will mean that essentially India will have, after Mumbai and Chennai, a third digital international subsea gateway... connecting India directly with Southeast Asia, so Singapore and a couple of the other main markets, down into Australia and right around into the Middle East and Europe and

Network busy

A.P.'s coastline will soon hold new landing stations for subsea cables, which connect global internet with India

■ Essentially India will have a third digital international subsea gateway connecting India directly with Southeast Asia

■ Microsoft is part of a consortium with firms like Lightstorm and Singtel to land the 3,600 km I-2SEA Submarine Cable System

beyond. So this will... make India and Vizag in particular one of the most connected places in the world," Mr. Smith added.

Lightstorm CEO Amajit Gupta said in an interview with *The Hindu* in June that I-2SEA "connects South-east Asia, specifically Singapore and Malaysia, to the east coast of India," and that the cable system, which also connects to Chennai, "provides a brand new corridor to South Asia" from South East Asia, where a lot of infrastructure serving Indian enterprises and consumers continues to reside.

The cable system is set to be ready for service in Q4 2029. Mr. Gupta said that new cable buildout in a fresh location was key to preserving Indian internet connectivity from a strategic standpoint.

"If you peel the onion and look at the cables which connect the east coast of India... most of these are pretty old cables," he said. "They are easily about 8, 10, 12, 15

years old... [they] are filled with capacity and are also rapidly running into end of life." Mr. Gupta said that there were geopolitical de-risking tailwinds driving these investments. "I don't need to tell you what's happening in West Asia, which means people are beginning to think, hey, now this is getting so dangerous, why can't we flush the traffic out to the eastern coast of India so that at the least I have resilience and at the best I have an alternate path [in case connectivity is lost]."

On top of the subsea cable landing, both projects require significant infrastructure further inland. "This is a pan-India project," Mr. Smith said.

"We're needing to install and then light and operate thousands of kilometres of new fiber ... I think what's kind of underappreciated is that this will really create a robust new layer of digital connectivity... that will go between some of the mainline metros." Taking a cue from

landside fiber built on top of electrical transmission lines, Mr. Gupta said that Lightstorm is "likely to build a terrestrial corridor ... which will connect Machilipatnam to Mumbai, Hyderabad and similarly Chennai to Hyderabad and Mumbai with the same bandwidth".

"Fiber itself is out of stock across the globe," Mr. Gupta said, adding "including from Indian manufacturers. And then the fiber sub-components, the fiber raw material, the inputs are all in short supply. So that has never been the case for the last 10 to 15 years."

Google facility

Mr. Smith said that Google's Visakhapatnam facility will focus on inference, with no immediate plans for performing power-hungry training runs. He added that the firm was trying to acquire as much renewable power for the project as possible – pointing out that Google is among the biggest buyers of renewable energy in the world – and that water use minimisation was also on the agenda with air cooling technologies.

He added that the Google facility will focus on inference for domestic enterprises and government agencies, as there has been "pretty deep AI adoption across the delivery of government services at the State levels as well as Union level."

SEBI to propose SOP for unscheduled holidays

Ashokamithran T.
MUMBAI

The Securities and Exchange Board of India (SEBI) is set to propose a standard operating procedure (SOP) for operational activities related to unscheduled market holidays, as part of efforts to strengthen market resilience while improving efficiency and ease of doing business.

"Our endeavour has been to build resilience and strengthen the risk management systems. At the same time, we want to facilitate greater efficiency and ease of doing business," SEBI Chairperson Tuhin Kanta Pandey said at an event marking the 30th

Tuhin Kanta Pandey

anniversary of NSE Clearing Ltd. on Thursday.

Addressing questions on potential changes to the newly introduced Closing Auction Session (CAS), he said currently there were no plans to modify the system and expressed confidence that participation would increase over time.

GAIL to stretch natural gas pipeline network up to 20,000 km: CMD

The Hindu Bureau
NEW DELHI

Gas Authority of India Limited (GAIL) has about 1,500 km of natural gas pipeline under construction, which upon completion would expand its network to about 20,000 km, Deepak Gupta, Chairman and Managing Director (CMD) said at the company's AGM with shareholders.

"Our network now extends over 18,690 km, with nearly 1,500 km under construction. Upon completion of the ongoing projects, the network will expand to almost 20,000

km," the CMD said.

In his address, Mr. Gupta also underlined that GAIL was also expanding their LPG transmission network. He pointed to the Delhi-headquartered distributor expanding the capacity of its LPG transmission pipeline from Jamnagar to Lonl, from the present 3.25 MMTPA to 6.5 MMTPA.

This would further build on three LPG pipelines, cumulatively spanning about 1,775 km, for which it recently received a go-ahead from the Petroleum Natural Gas and Regulatory Board (PNGRB).

Insurers can invest in NDB's onshore rupee bonds, says IRDAI

N. Ravi Kumar
HYDERABAD

Insurance regulator IRDAI permitted insurers to invest in Maharajah INR Bonds (Onshore Rupee Bonds) of the New Development Bank (NDB), an approval that assumes significance ahead of next month's BRICS Summit in New Delhi.

It follows representation from the NDB seeking approval, for the NDB Maharajah INR bonds under which it proposes to raise ₹25,000 crore over a five-year period, the Insurance Regulatory and Development Authority of India (IRDAI) said communicating its approval to the insurers in a circular.

The multilateral development bank, established by Brazil, Russia, India, China and South Africa (BRICS), intends to use the bond proceeds towards general corporate purposes for financing/onward lending to sustainable development, sustainable infrastructure, green, social projects in India.

"The proposed onshore rupee bond issuances by NDB are covered under the definition of Securities under the Securities Contracts (Regulations) Act, 1956," IRDAI said, explaining it is permitting investments in the same to enable insurers to have more scope for investments. It will be part of the 'approved investments' and subject to the bonds governed by norms, if any, laid by Government of India and SEBI approval among others."

The NDB is a multilateral development bank.

SOLID TECHNIQUE

Padikkal produced good Test-match batting: Kirsten

PTI

Devdutt Padikkal gained a fan in Gary Kirsten. The Sri Lanka coach said: “I liked the way Padikkal batted. The thing with players, who play multiple formats, is that they tend to replicate the style but Padikkal produced good Test-match batting. His innings at Galle was special, he has a solid game”.

IMMOVABLE OBJECT

Dinusha batted really well and hardly offered any chances: Gill

AP

Sonal Dinusha may have frustrated the Indians but skipper Shubman Gill lauded Sri Lanka’s latest star. “Dinusha batted really well, he has a good defence, played his shots, swept and drove, hardly offered any chances. We did think about testing him with pace but on this pitch (Colombo) he was comfortable”.

REMARKABLE RUN

Dinusha joins Zimbabwe legend Andy Flower in elite club

PTI

Sonal Dinusha became the second player after Andy Flower to register four successive fifty-plus scores against India in a two-Test series. The Sri Lankan also joined Douglas Jardine, Everton Weekes, Clyde Walcott and Ken Barrington as the fifth batter to score fifty-plus scores in the first four Test innings against India.

DETERMINED

Will keep working hard, being in the XI not in my control: Padikkal

AFP

You always want to play. You want to represent your country and keep working hard. That is the only thing in your control. Being in the XI is not in your control. You have to help your teammates whenever you get an opportunity — Devdutt Padikkal after winning the Player-of-the-Series award against Sri Lanka.

Dinusha keeps India at bay, earns Lanka a draw

The left-hander notches up his third hundred in four innings to take the host to safety along with tailenders Nuwantha and Kumara; Gill’s men finish with a 1-0 series triumph

INDIA IN SRI LANKA

K.C. Vijaya Kumar
COLOMBO

In the instant gratification that limited overs cricket offers, results oscillate between triumphs and defeats. Tests, though, can yield another conclusion, the stalemate, technically called the draw.

A final verdict that remains inconclusive may be presumed dull, but at times a draw can reveal a glorious fightback and reiterate cricket’s philosophical second-skin often whispered as ‘glorious uncertainties’.

Sri Lanka precisely did this while snatching a draw in the second Test against India at the Sinhalese Sports Club Ground on Thursday. Sonal Dinusha (133 n.o., 264b, 8x4, 2x6) scripted this miracle on the concluding day, as the southpaw’s hundred, second in the match, and third in the series, kept the visitor at bay.

The host declared its second innings at 429 for nine, a stunning comeback after conceding a 213-run first innings lead. India had to rest content with a muted series triumph at 1-0 when a 2-0 seemed possible especially after enforcing the follow-on. At one point Mohammed Siraj swapped bails at the striker’s end, and it reflected the despair coursing through Shubman Gill’s men under the harsh Colombo sun.

In the morning, resum-

Heroic deed: Dinusha led a glorious fightback by Sri Lanka on the final day and thwarted India’s victory bid. PTI

ing at 229 for six, Sri Lanka, ahead by a mere 16, found its saviours in Dinusha and Keshara Nuwantha. The duo exhibited synergy and patience while a few miscued shots eluded fielders like Devdutt Padikkal.

Gill switched from spin to pace at both ends as Prasidh Krishna and Siraj operated in tandem. Nuwantha drove Prasidh and after a play-and-miss routine against Siraj, picked two fours off the speedster.

When Ravindra Jadeja stepped in, Dinusha feathered one past a diving leg-slip. Soon the batter got to his 50 and after Nuwantha survived an lbw appeal from Jadeja, Sri Lanka moved to 329 for six at lunch.

The first session that yielded 100 without any loss of wickets, meant that Sri Lanka could keep its hopes alive. After the break, Nuwantha (46, 150b, 4x4) pushed forward to left-arm spinner Manav

Suthar and edged to Dhruv Jurel at first slip. By then he and Dinusha had added 112 runs for the seventh wicket, constituting a vital part of Sri Lanka’s resistance.

Gill attempted a scorched-earth policy against Dinusha. Placing eight fielders on the off-side while Siraj bowled around the off-stump. At times, the field was reversed and then the spearhead pegged away on the leg-side. Wear the Sri Lankans down and trigger a

mistake, seemed to be the plan.

Just that Dinusha remained unruffled. He punched Prasidh past sweeper-cover, and then guided Jadeja over mid-wicket. Meanwhile, Prabath Jayasuriya fell to Jadeja, finding Jurel nearby.

A swept four off Suthar helped Dinusha move to 98 and at tea, the host was 383 for eight, reflecting a dour second session in which 54 runs were scored. When the last act

Gill defends decision to enforce follow-on

One that got away: Gill termed the draw a disappointment. AFP

K.C. Vijaya Kumar
COLOMBO

Ever since V.V.S. Laxman and Rahul Dravid ambushed Australia at the Eden Gardens in 2001, most skippers are wary about asking the rival team to bat again. But there are exceptions and Shubman Gill, goaded by the whimsical rains in the Sri Lankan capital, had no hesitation in enforcing the follow-on.

However, the men from the Emerald Isle, admirably guided by centurion Sonal Dinusha gained a hard-fought draw in the second Test here at the Sinhalese Sports Club Ground. Gill, though, felt that given the match-situation, his decision was fine. “I would not say it (follow-on) backfired. We were also anticipating (wet) weather on day four and five. But you have to take the best decision possible in that situation,” Gill told the media here on Thursday.

Explaining the strategy, the Indian skipper said:

“We attacked in the beginning but as the match went on, the pitch got slower. As a batter, if you know that bowlers do not have two modes of dismissal (bowled and lbw) in play, then it becomes easier to bat. We tried our best but they also batted really well. It was obviously disappointing.”

Looking back at the series, Gill drew heart from the performances of some players: “Devdutt (Padikkal) did really well. And Manav (Suthar), technically this is his first full series, did well. Prasidh (Krishna) has been the pick of our bowlers, been our go-to bowler and created chances. Overall we played good cricket.”

WTC final hopes

And as for a chance in the ICC World Test Championship final, Gill leant on hope: “I still think we have a pretty good chance to qualify. If we play the New Zealand series well and then hopefully when Australia comes, we just have to win that series”.

Smith, Cox shine for England on opening day

Agence France-Presse
LONDON

Jamie Smith and Jordan Cox both scored fifties as England recovered from a top-order collapse against Pakistan to reach 248 for nine when bad light ended Thursday’s opening day of the second Test at Lord’s.

Veteran paceman Mohammad Abbas took three wickets for four runs off 16 balls, including the prized scalp of England captain Joe Root for just four, as the host slumped to 36 for three after Pakistan won the toss in helpful conditions for seam bowling.

But Smith’s 61 and Cox’s 55 got England back into the game.

Abbas claimed four for 56 while fellow seamer Mohammad Ali scalped three for 67.

The scores: England 248/9 in 56 overs (Cox 55, Smith 61, Abbas 4/56) vs. Pakistan. Toss: Pakistan.

Alcaraz and Sabalenka handed tough draw

Hands full: Stiff challenges await holder Sabalenka. GETTY IMAGES

US OPEN

Reuters
TORONTO

Defending US Open champion Carlos Alcaraz faces a challenging road to the New York final while Aryna Sabalenka will also have her hands full in her bid for a three-peat, following Thursday’s draw.

Alcaraz, who is returning to singles action after sitting out five months with a wrist injury, landed in the stronger bottom half of

the men’s draw along with former champions Novak Djokovic, Daniil Medvedev, Stan Wawrinka and Marin Cilic.

The Spanish second seed will start against Roman Safiullin.

On the women’s side, top seed Sabalenka will play Colombian Camila Osorio in her opening match and faces a potential quarterfinal clash with reigning Wimbledon champion Linda Noskova and a semifinal showdown with an in-form Jessica Pegula.

Indian women down Germany for best finish since inaugural edition

HOCKEY WORLD CUP

Aashin Prasad
AMSTELVEEN

Relevance for World Cup classification matches is a matter of perspective. For this Indian women’s team, which suffered a heart-breaking exit in its push for a semifinal berth, a best-ever finish since the inaugural 1974 edition was at stake.

Having picked itself up to go again, this side earned itself a small piece of history by finishing fifth with a 3-1 win over Germany here at the Wagener Stadion on Thursday.

It was a counter-attacking clinic as goals from Ishika and Navneet Kaur in the second half subdued the World No. 5 ranked side.

Starting the tournament ranked ninth, Sjoerd Marijne’s India exceeded expectations in the Netherlands, pulling off draws

Time for cheer: The Indian women’s team is a happy bunch after beating Germany. X@THEHOCKEYINDIA

against China (ranked fourth), England (seventh) and Australia (eighth) to add to this result.

It will now head into the Asian Games next month, confident of challenging for the gold.

After a passive start, Germany came alive in the second quarter, making multiple circle entries without threatening India’s goal. But it was India which shaded Germany for attempts on goal, when Nav-

neet’s powerful backhanded drive drew a save from Finja Starck. Salima Tete was alive to a couple of rebounds but Starck kicked them both out.

Germany continued to dominate possession for majority of the game, but the Indian defence, which included tournament debutant, Lalhantluangi, held firm.

Then, against the run of play, India opened the scoring after Neha slipped

a through ball for Ishika, who composed herself before lifting the ball past Starck for her first World Cup goal.

India found plenty of joy through Germany’s centre, repeatedly catching its defence out on the counter. After having gone three games without a goal, India suddenly scored three in the space of four minutes.

After going cold from PCs in previous outings, Navneet struck from India’s second short corner before she added another with a cool flick into the roof of the net from another turnover.

Germany persevered in the last stretch with Savita Punia needing to pull off a couple of key saves, but she couldn’t keep out Lynn Krings’ effort with 67 seconds left on the clock.

The result: India 3 (Ishika 42, Navneet Kaur 43-pc, 46) bt Germany 1 (Lynn Krings 58).

PSG to face Barca, City, Villa in UCL

Agence France-Presse
MONACO

Two-time defending champion Paris Saint-Germain was handed meetings with Barcelona, Manchester City and Aston Villa among its eight matches in the league phase of this season’s Champions League, as the draw took place on Thursday.

PSG will play Barcelona, Roma, Turkish champion Galatasaray and Slovan Bratislava of Slovakia at home.

Luis Enrique’s team will travel to England twice to face City and Villa. The French champion will also go to Spain to play Villarreal and Italy to take on Como.

The first matches in the league phase will be played between September 8 and September 10, with the final games in late January. The UEFA is expected to announce the full fixture schedule on Saturday.

Series victory fails to mask grey areas as India prepares for daunting challenges

Padikkal blossomed, Jurel showed his worth and Prasidh hit his stride in the Emerald Isle; however, the tour exposed a thinning spin cupboard

R. Kaushik
COLOMBO

How often does a draw feel like a defeat? And a stalemate assume the hue of a victory? Often enough, Shubman Gill will insist.

Despite their own uneasy recent dalliance with the five-day format, India would have fancied their chances of bearding the Sri Lankan lion in its own den in a two-Test series that is pretty much the norm when the world's most sought-after side isn't playing against Australia or England.

India hadn't lost a series in this country since 2008 and arrived early this month sitting on a five-Test winning streak on Sri Lankan soil. Even though their last visit was in 2017, they had reason to believe the hosts were ripe for the taking.

Significant result

The script seemed to be holding true. Notwithstanding pockets of defiance from their young guns, led by the exceptional Sonal Dinusha, Sri Lanka slumped to a 185-run rout in Galle in the first Test. The result assumed a more significant hue because India were without two-fifths of their first-choice bowling attack – Jasprit Bumrah and Washington Sundar were missing through injuries – but still won a rain-hit encounter with quite a bit to spare.

There was excellent reason, therefore, to aspire for a 2-0 sweep ahead of the second Test at the SSC ground. Sri Lanka, already without Pathum Nissanka and Kusal Mendis, were dealt another unkind cut when Dinesh Chandimal was ruled out of the second Test after hurting his neck while fielding in Galle. But as it turned out, his replacement, Pasindu Sooriyabandara, had a great game at the SSC, desperately unlucky to miss out of centuries in both innings.

Dinusha delights

Dinusha, however, ensured that a similar fate didn't befall him. Ahead of this series, the 25-year-old left-hander had played just three Tests but had showcased his ability and his temperament, not least in the Caribbean in June-July when he reeled off a sequence of 43, 12 not out, 92 and 28 in the two Tests.

It should have been fair warning well heeded; it will be presumptuous to say that India didn't pay much attention to the young man, but they didn't crack the Dinusha puzzle throughout the series, which is one of the main reasons they had to settle for a 1-0 scoreline despite dominating the second Test too for large stretches.

Dinusha batted for a little less than 20 hours in making 420 runs from 722 deliveries, the single point of difference as the Lankans ground out a fabulous draw

after being forced to follow on in the second Test.

It wasn't all doom and gloom from an Indian point of view. Devdutt Padikkal grabbed his chances with both hands in his first Tests in more than 20 months. In the absence of Sai Sudharsan, he took giant strides towards making the No. 3 slot his own with hundreds in the first innings of both games.

The volume of runs was impressive, but so was his presence in the middle. In further signs of his evolution as a dependable, oftentimes aggressive all-format batter, he treated the bowling with just about the respect it deserved, using the offside as his preferred area of scoring and looking equally comfortable against pace and spin.

India will find it very hard to look beyond him for the one-drop position when they play two Tests in New Zealand in November. After all, how can you overlook the credentials of someone as consistent as the Karnataka left-hander was in Sri Lanka?

And then, there was Dhruv Jurel, justifying the faith of the Gautam Gambhir-led think-tank which was sure that the wicketkeeper-batter was the answer to their prayers for a dependable middle-order batter who could play spin with soft hands, deftness of feet and no gremlins of self-doubt.

Assured batting

Alongside Sai Sudharsan and Padikkal, Jurel was one of the three batters Gambhir was keen should be a part of the India 'A' side that arrived on these shores for a shadow tour towards the end of June. Admittedly, neither Galle nor the SSC was a rank turner like Kolkata had been against South Africa in November, but Jurel didn't put a foot wrong either in front of the stumps – he had a half-century in the first Test which he topped with his second ton in the next – or behind it when Rishabh Pant sat out much of the Sri Lankan first innings in Colombo with an assortment of blows to his body.

K.L. Rahul was dependable without going big while Pant was, well, Pant – exhilarating, unpredictable, entertaining and compelling. Maybe Gill will be a little disappointed that he didn't join the list of centuries, but his batting looked in decent order, as did Yashasvi Jaiswal's even if he found novel ways of courting dismissals.

Then, there was Prasidh Krishna. Ahead of the series, Gill was asked if he had a difficult choice to make between the Karnataka pacer and the uncapped Gurnoor Brar as Mohammed Siraj's new-ball partner. The skipper barely batted an eyelid when he said that Prasidh was bowling the best with the red ball that he had ever seen him, and the strapping quick didn't disappoint.

Even on the placid decks on offer, he worked up good pace, extracted appreciable bounce and kept the batters honest. When he pitched the ball up, there was movement which, allied with pace in the region of 140 kmph, made him a tricky proposition.

Up for the challenge

Prasidh was up for any challenge, including doing the dirty job of trying to soften up the batters with his shortish length, and is shaping up into an excellent support act for Bumrah and Siraj. India will need their pacers to fire on all cylinders when they go to New Zealand, so from that perspective, the development of Prasidh is perhaps the single greatest takeaway for the decision-making group from this three-week sojourn to the Emerald Isle.

But there are worrying signs aplenty too, not least when it comes to back-up spin options. Despite starting his Test career with so much promise in New Chandigarh when he took six wickets in the first innings against Afghanistan, and despite his ten-wicket match haul in Galle, Manav Suthar is still very much a work in progress.

In Colombo, his craft had to play second fiddle to the slowness of the SSC strip; there was bounce aplenty, which took bowled and leg before out of the equation, but the left-arm spinner was slow to respond when the Sri Lankan batters resorted to the sweep and the reverse sweep.

It might appear a touch harsh on someone who was only playing in his third Test, but this is an early education for Suthar and he will do well to heed the lessons if he aspires to step into the shoes of Ravindra Jadeja going forward and become the lead bowler around whom the Indian spin attack will revolve in the future.

Debut to forget

While Suthar did show signs of promise, Saransh Jain had a disappointing debut – and there is no way to sugarcoat that. On the radar of those involved in talent-identification and selection matters for a while now, Jain is an experienced hand at 33, with more than 50 first-class appearances under his belt for various outfits.

His first delivery in Test cricket was a no-ball, which can perhaps be put down to nerves, but he bowled six more of them across the two innings, which couldn't have pleased anyone, least of all new spin bowling coach Sairaj Bahutule. But it wasn't just the no-balls that were grating. While he did show reasonable control, the threat quotient was barely perceptible.

Saransh wouldn't have been here if Washington was available but as a fallback alternative, he has a long way to go. In

some ways, it points to a slight thinning of resources in the spin cupboard, which ought to worry those in the corridors of power because for so long now, India have got used to having the now-retired R. Ashwin and Jadeja to spin their webs of deception and lure batters to their doom.

After a lull, India have plenty of fast-bowling options to summon despite Mukesh Kumar and Akash Deep and Harshit Rana and Nitish Kumar Reddy spending a lot of time in the infirmary. But for the traditional land of spin to struggle to unearth an incisive off-spinner is a little hard to fathom and harder still to digest.

Jain deserves the benefit of doubt – after all, this was Test No. 1 and maybe he did have the proverbial ordinary one-off game – but for him to set himself up as a semi-long-term option, there must be obvious signs of improvement.

This tour in general, and the second Test particularly, was a steep learning curve for the captain. It's been a little over 14 months since Gill first led the Test team, in England in Leeds last June. Captaincy looks simple from the outside but entails plenty of decision-making on the fly, even in Test cricket, without second-guessing oneself.

He was handicapped by a rapidly softening ball in Galle and by an SSC surface that had bounce but hardly any pace. Some of the fields he employed were strange, there was a definite occasional slant towards passivity, and the move to almost ignore trying to get Dinusha out on the final day of the series and target the other end was little short of self-defeating.

Mixed run

Gill has had a mixed run as captain – 2-2 in England, 2-0 at home against West Indies, defeat in his only Test against South Africa in Kolkata when he faced a mere three deliveries before contracting a neck injury, a hammering of Afghanistan and now this 1-0 success in Sri Lanka, his first overseas victory as skipper.

The journey has been challenging and exciting, but daunting outings lie in store in the red-ball version before he starts to focus exclusively on the 50-over format ahead of the World Cup in southern Africa in the second half of next year.

India haven't won a Test in New Zealand since 2009 when Mahendra Singh Dhoni led them to a famous series triumph, and their last visit in 2020 was an unmitigated disaster as they were soundly beaten in both matches.

New Zealand will test the technique and the character of the batting group with its seam-friendly conditions, after which Australia will come calling for five Tests in India. Gill must be on top of his game – as lead batter and as leader – and towards that end, Sri Lanka was a timely, useful wake-up call.

THE GIST

- ▼ Padikkal has taken giant strides towards making the No. 3 slot his own with hundreds in the first innings of both games at Galle and Colombo
- ▼ Even on the placid decks on offer, Prasidh worked up good pace, extracted appreciable bounce and kept the batters honest
- ▼ Jurel has emerged as a dependable middle-order batter who can play spin with soft hands and deftness of feet without any self-doubt
- ▼ Dinusha's patient and purposeful batting was one of the reasons India was unable to make the second Test its own

HEALTH

The changing face of skin lightening practices in India

The language around skin lightening has changed, but the desire for it has remained strong in India; a lot of the advertisement and marketing has now moved online; the country needs strong legislation, campaigns to educate patients, pharmacists and healthcare professionals, and a conversation that shifts the focus to skin health, not colour

Monisha Madhumita

The language of fairness may be changing, but the desire for lighter skin has not necessarily disappeared in our country. As skin-lightening practices move into skincare, dermatological procedures and digital spaces, the health consequences are becoming increasingly harder to recognise and regulate.

Skin lightening in India is changing. The fairness creams that once dominated advertisements are less visible today. The language around them has also shifted. Words such as ‘brightening’, ‘glow’, ‘de-tan’ and ‘even tone’ are now common across skincare products and digital platforms.

For dermatologists, this change is increasingly visible in clinical practice.

Patients may not come to the clinic saying that they have been trying to become fairer. They often present because something has already gone wrong. There may be acne, redness, thinning of the skin, increased facial hair, pigmentation or infections. Oral agents used with the expectation of achieving lighter skin are also being sought.

“We see patients because of the side-effects of what they have tried, and then work backwards,” says Rashmi Sarkar, head and director - professor, department of dermatology Vardhman Mahavir Medical College and Safdarjung hospital, New Delhi.

The profile is changing too. What was once viewed largely as a concern among women is now also seen among men, teenagers and transgender persons. This makes skin lightening an important skin-health issue, rather than simply a cosmetic concern.

Not all treatment that reduces pigmentation is skin lightening.

Melasma and post-inflammatory hyperpigmentation are common pigmentary disorders. They can be persistent and distressing, particularly in darker skin tones. These conditions may require treatment. The important distinction, Dr. Sarkar says, is between treating a pigmentary disorder and attempting to lighten a person’s normal, constitutive skin colour. This distinction is becoming less clear to consumers.

A product described as ‘brightening’ may be intended to reduce pigmentation, improve dullness or make the skin appear more even. The term itself does not explain what is being changed.

For clinicians, the focus should remain on skin health. Brighter-looking skin can follow better photoprotection, appropriate skincare, control of inflammation and improvements in general health and lifestyle. None of these requires changing a person’s natural skin colour.

Digital shift

The larger change is taking place online.

Skin-lightening messages are no longer limited to television advertisements or product packaging. They are increasingly delivered through influencers, e-commerce platforms, before-and-after photographs and social media.

Need for regulation: Skin-lightening messages are no longer limited to television advertisements or product packaging. They are increasingly delivered through influencers, e-commerce platforms, before-and-after photographs and social media. GETTY IMAGES

Algorithms can amplify these messages. A person who watches one video on pigmentation may subsequently be shown repeated content around brightening products, supplements, peels or procedures. Filters and image manipulation add another layer. Photographs can be altered to make skin appear lighter, smoother or more uniform. Artificial intelligence can make these alterations increasingly difficult to recognise.

Dr. Sarkar believes public education, must therefore, also address digital literacy. People need to learn to recognise filtered or manipulated images and to question the aesthetic standards repeatedly presented to them online.

The impact is particularly relevant for younger users. Repeated exposure can gradually alter what is perceived as normal skin and what is considered a problem requiring correction.

Excessive treatment

The growth of aesthetic skincare has also widened the number of places where people seek treatment.

Patients may move between dermatology clinics, aesthetic centres, salons, spas, social media and online marketplaces. The distinction between medical treatment and cosmetic marketing can become unclear.

Dr. Sarkar stresses that pigmentary disorders should be assessed by qualified dermatologists. Procedures also need to be selected carefully and patients should not be overtreated. This is particularly relevant in darker skin tones, where inflammation caused by aggressive treatment can itself lead to further pigmentation. The treatment can then become part of the problem.

There is also a role for clinicians in managing expectations. Not every variation in skin colour requires treatment. Unregulated over-the-counter

skin-lightening products should be avoided and unrealistic expectations need to be addressed early.

The health consequences can be significant. The International League of Dermatological Societies (ILDS) has warned that the misuse of potent topical corticosteroids in skin-bleaching products can contribute to treatment-resistant fungal infections, irreversible skin damage and systemic side-effects. The organisation has called for stronger regulation, clearer guidance and better public education.

Beyond the clinic

The response to skin lightening therefore also needs to change.

Traditional awareness campaigns remain important, but they may no longer be sufficient when much of the contemporary conversation is taking place online. This is a particular focus of the ILDS Strategic Working Group on Skin Bleaching. The group brings together international dermatology expertise to address harmful skin-lightening practices while also recognising the legitimate need for safe, evidence-based treatment of pigmentary disorders.

The message, says Dr. Sarkar, who is part of the working group, needs to reach people where these practices are now being discussed and promoted. “We need to leverage social media and amplify the message,” she says. This includes closer collaboration between the ILDS and national dermatology societies, as well as engagement with pharmacists, educators and credible public voices.

India has previously seen organised campaigns around inappropriate topical steroid use. These efforts included education of both patients and pharmacists. A similar approach is now needed for contemporary skin-lightening practices.

The ILDS initiative also has a wider

aim: to move the conversation away from skin colour as an aesthetic hierarchy and towards skin health. The message is simple, but important. Healthy skin exists in every shade.

For those experimenting with skincare routines, particularly skin lightening, it means understanding the difference between a pigmentary disorder and normal skin colour. It means recognising that medicines used without appropriate supervision can damage the skin. It means knowing that repeated procedures are not always better treatment. Increasingly, it also means understanding that the images seen online may have been filtered, lightened or otherwise altered.

Regulation will need to evolve alongside this change. Looking only for products explicitly labelled as ‘fairness’ products will miss part of the contemporary market. Claims, ingredients, digital advertising, influencer marketing and access to potent medicines all require attention. But regulation alone cannot address the deeper issue.

Greater awareness has made overt fairness advertising less acceptable. Yet, as Dr. Sarkar points out, social perceptions around skin colour continue to persist. The challenge is therefore no longer only the fairness cream. The people seeking these interventions are also changing. The response now needs to change with them.

For dermatologists, professional societies and public-health organisations, the opportunity lies in moving beyond treating complications after they occur. The focus must be on prevention, evidence-based care, digital education and a clearer understanding of what healthy skin actually means.

Salmonella infections: why India needs to look beyond typhoid and diarrhoea

Athira Elssa Johnson

Salmonella is often linked to food poisoning, diarrhoea and typhoid. But the infection can range from mild gastroenteritis that gets better on its own to a serious bloodstream infection, and therefore, say experts, deserves more attention than it is currently being given.

Salmonella is a group of bacteria that can cause different infections. Typhoid and paratyphoid or enteric fever, are caused by Salmonella Typhi and Salmonella Paratyphi. The problem, however, is broader than typhoid. Non-typhoidal Salmonella infections, which often cause gastroenteritis, may go undiagnosed because many people recover without testing. At the same time, antibiotic resistance is making serious infections harder to treat.

Why infections turn serious

Non-typhoidal Salmonella commonly causes gastroenteritis, with diarrhoea, stomach cramps, fever and sometimes vomiting. It is

often linked to poultry, eggs and other animal-based foods. Most healthy people recover with supportive care, but the infection can become serious and spread to the bloodstream. “Salmonella should not be seen as only a cause of diarrhoea,” said Sweatha Kumar, associate consultant, infectious diseases, Rela Hospital, Chennai. “In some patients, especially young children, older adults and those living with other illnesses or weakened immunity, it can become invasive and life-threatening.”

Suresh Kumar D., senior specialist in infectious diseases, Apollo Speciality Hospitals, Vanagaram, Chennai, said the actual burden of non-typhoidal Salmonella is difficult to estimate as many mild infections are never diagnosed.

Both typhoid and non-typhoidal Samonella infections spread through the faecal-oral route, but their sources are different. For typhoid, humans are the reservoir. Non-typhoidal Salmonella has a wider ecology, involving animals, food and the environment. Poultry,

Preventing infections: Typhoid conjugate vaccines, safer water and sanitation, food safety and antimicrobial stewardship all have a role in reducing infections. WIKIMEDIA COMMONS

eggs, meat and other animal-derived foods can be sources. Transmission can also occur when raw meat contaminates ready-to-eat food during preparation.

“Contamination can occur at multiple points, from farms, slaughterhouses and food processing to transportation, storage, restaurants and finally the household kitchen,” Dr. Sweatha said. “That is why Salmonella is very much a One Health problem

involving humans, animals, food and the environment.”

Food handlers can play an important role in transmission, as those carrying the infection can contaminate food and potentially expose many people to the bacteria. But food safety cannot depend only on individual food handlers. The wider system needs better training, sanitation, refrigeration, monitoring and enforcement. While the Food Safety and Standards Authority of

India has surveillance and testing systems, gaps remain, particularly in the large informal food sector.

At the household level, it is important follow: washing hands, using safe water, cooking poultry and eggs thoroughly, refrigerating perishable foods appropriately and keeping raw meat separate from ready-to-eat food.

Challenges and way forward

The major concern is the growing antimicrobial resistance in Salmonella. India has seen a major shift in the resistance pattern of S. Typhi. A recent study in *PLOS Neglected Tropical Diseases* said, culture-confirmed isolates from 1977 to 2024 found that fluoroquinolone resistance rose sharply, reaching 85% in 2015-19, and remains high despite a subsequent decline.

“The emergence and spread of extensively drug-resistant typhoid shows what can happen when resistance accumulates across multiple antibiotic classes,” Dr. Sweatha said, “It can leave clinicians with very limited treatment options.”

Experts say the answer is not to simply use stronger antibiotics. Blood culture is the main test for suspected typhoid and should ideally be done before antibiotics are started. The Widal test has limitations and should not be used alone to diagnose typhoid. For uncomplicated non-typhoidal Salmonella gastroenteritis, treatment mainly involves adequate fluids and electrolyte replacement. Antibiotics are usually reserved for severe or invasive infections and people at higher risk of complications.

Prevention remains as important as treatment. The World Health Organization recommends typhoid conjugate vaccines for children from six months of age; however, this not yet part of India’s universal immunisation programme.

The challenge is to treat the infections that genuinely require antibiotics while preventing the infections that can be prevented in the first place.
